Introduction

Clarico Vega is a Responsive, Clean, Modern & Sectioned Odoo eCommerce Theme. Crafted to be Pixel Perfect, it can be suitable for any kind of online store category like Furniture, Fashion, Electronics, Beauty, Health & Fitness, Jewellery, Sports etc. Clarico Vega is an Ecommerce business-oriented theme that fulfills the main feature of ecommerce.

It is a fully responsive theme and looks equally stunning on all kinds of screens and devices. It is built with various attractive features like 11 Custom Header styles, 7 Custom Footer Styles, 16 Custom Button Styles, 6 Custom Mega Menu Layouts, Lazy Load, Load More products, Quick View, Login Popup, Price Filter, 10+ Dynamic Snippets, 115+ Designed Custom Snippets etc.

Install & Update The Theme

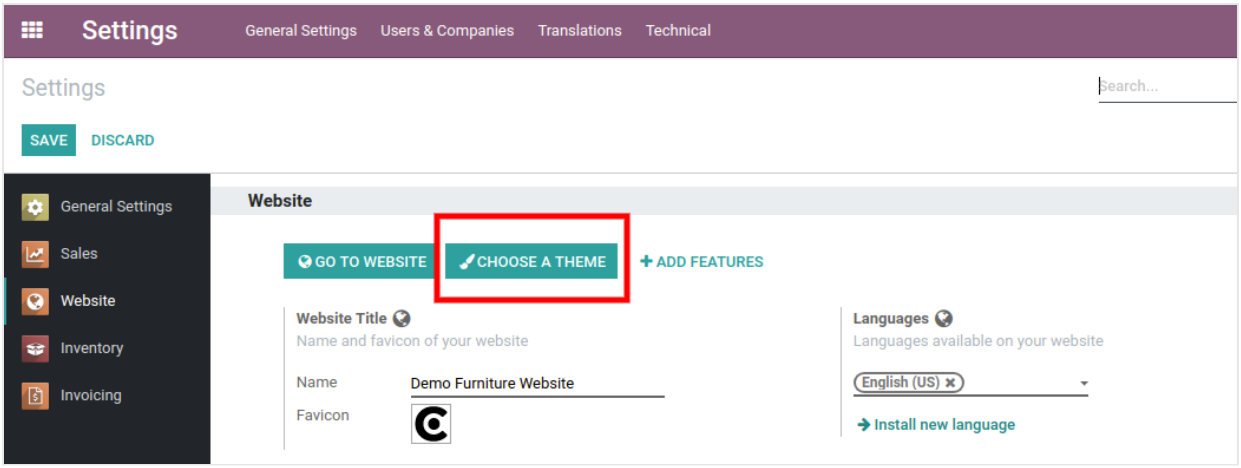
Before installing the Theme Clarico Vega, make sure that you have downloaded the latest Odoo version as well as the latest version of Theme Clarico Vega along with its submodules.

Install Theme

Once you download the Theme Clarico Vega from the Odoo store, you will get the multiple folders and there is one folder named "theme_clarico_vega". It's a theme folder and other folders are dependent modules.

Add all of the folders in your addons directory and restart the Odoo server and update your app list from the 'Apps' menu from the admin view.

Now go to Website → Configuration → Settings. In Website settings, select a website in which you want to install Theme Clarico Vega, click on the "Choose A Theme" button. You will be redirected to the list of available themes. Click on Theme Clarico Vega to Install it on your website.



Update The Clarico Vega

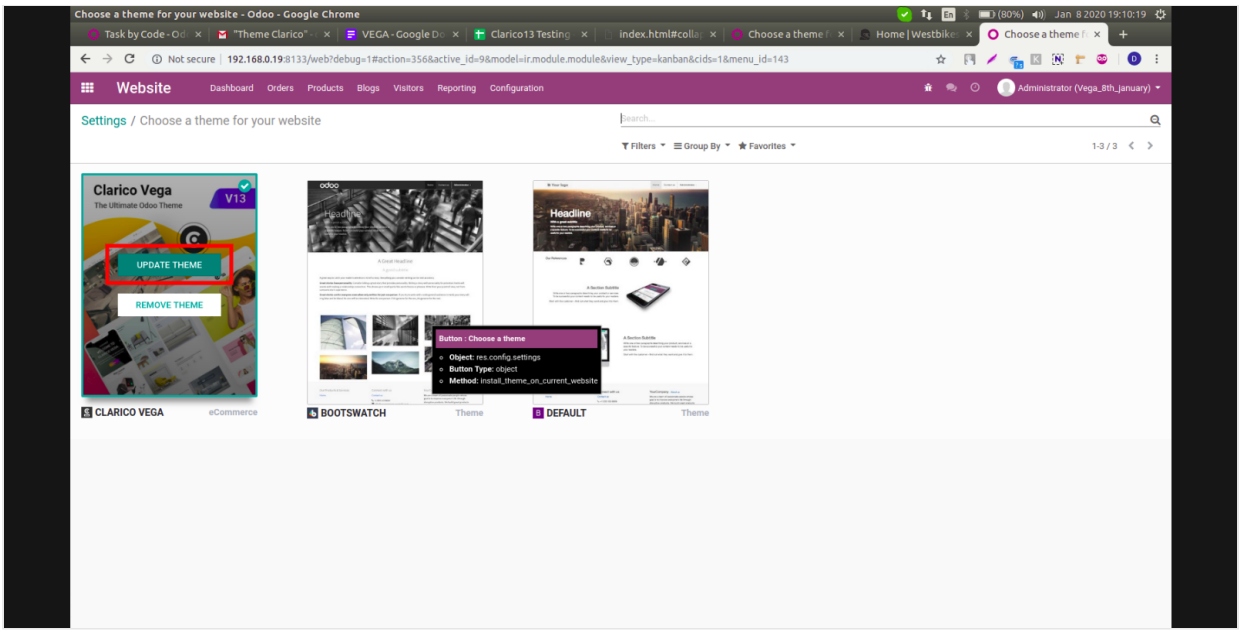
To update the latest version of the theme, First, download it from Odoo Store and replace it with your existing Theme source code. There can be two scenarios for updating Theme features.

Changes Into Emipro Theme Base

These modules contain business logic and functional elements for all Emipro eCommerce themes in Odoo V13. So if there are any changes in business logic, then you need to mandatory upgrade the "Emipro Theme Base" module.

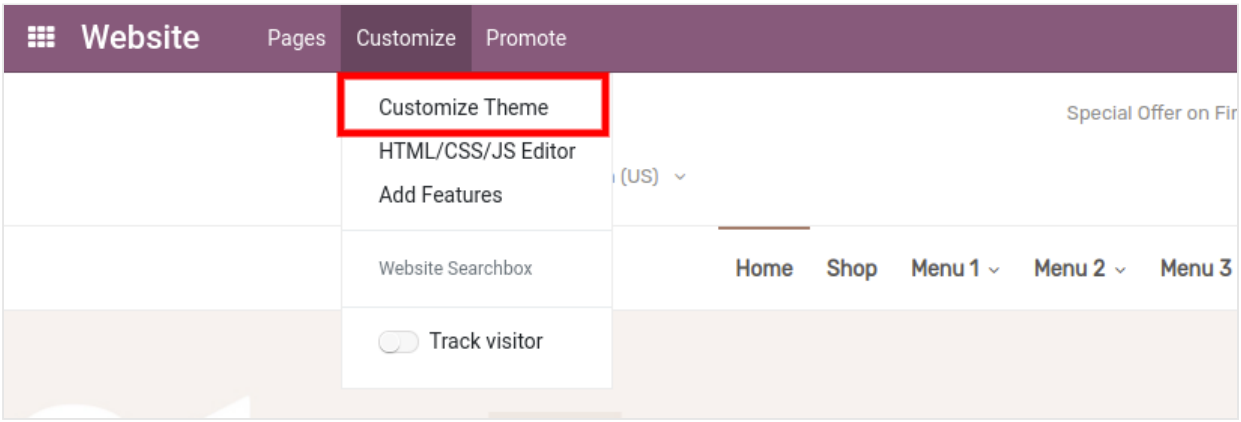
Changes Into Theme Clarico Vega

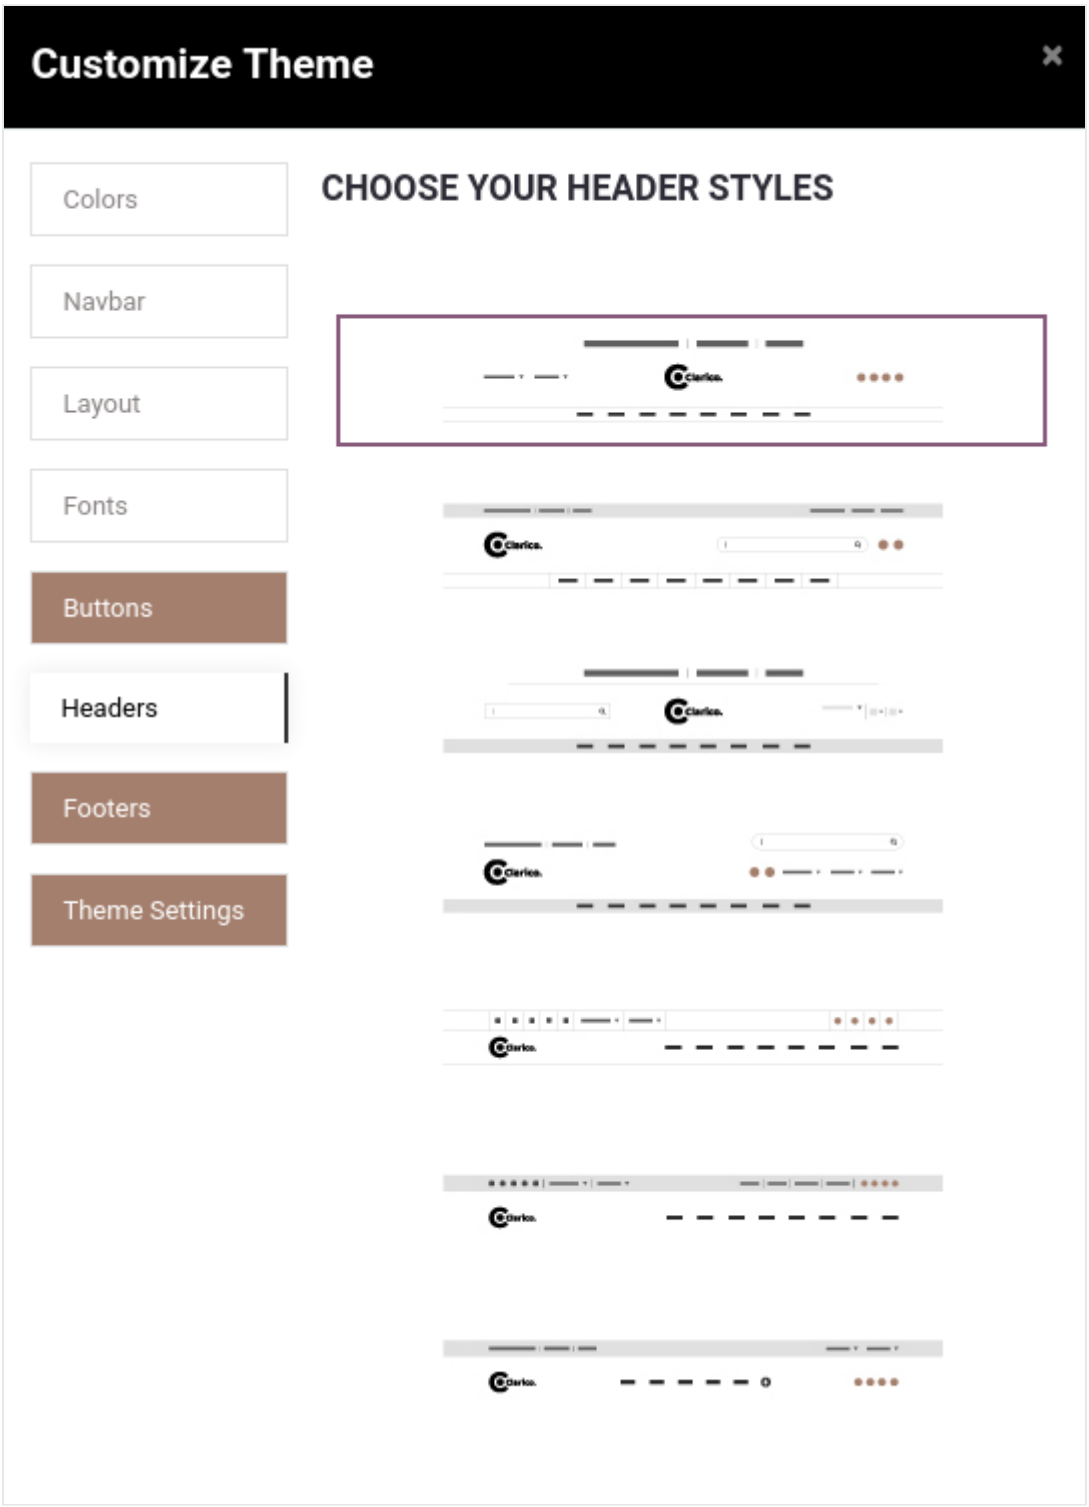
'Theme Clarico Vega' contains UI elements. So if there are any updates related to UI or template then you need to upgrade the Theme. For that, navigate to 'Website → Configuration → Settings' and select the website and click on 'CHOOSE THEME' then update the theme.



How To Change Header Style?

To change the header style, go to Web Pages -> Customize -> Customize Theme -> Headers and choose the header style.





Customize Theme

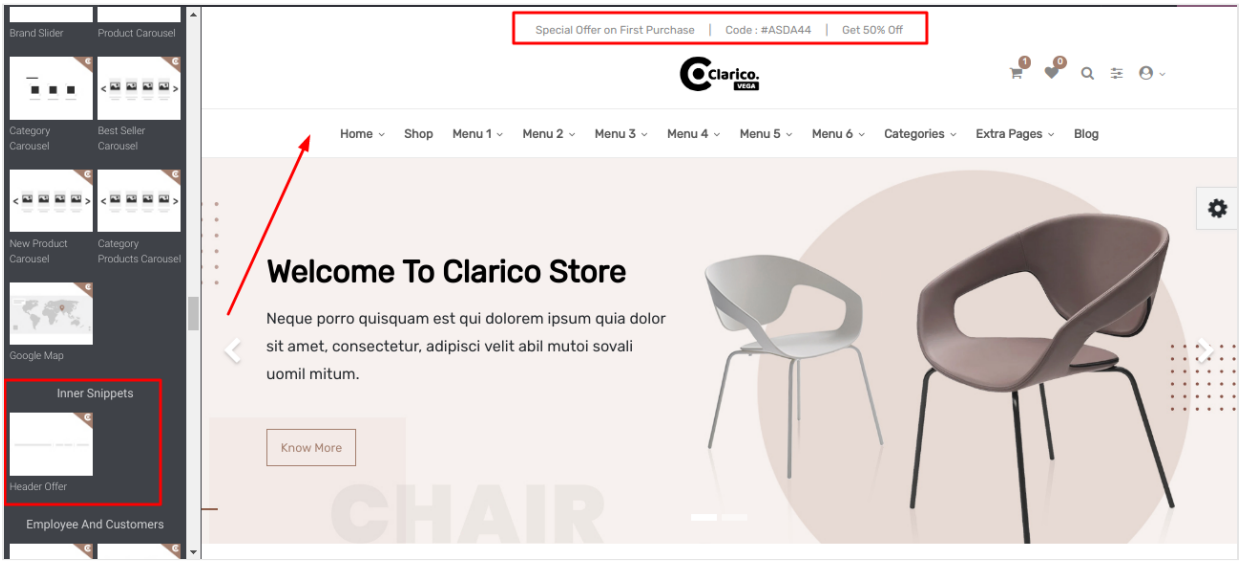
As shown in the above screenshot we provide 16 button styles so you can easily configure the best button style as per your business needs.

Button style 16 only for the gradient, in that we use Extra Color-2 and Extra Color-3 as per the screenshot above. You need to set up your gradient color in the Extra Colors option.

How To Enable Header Offer Style?

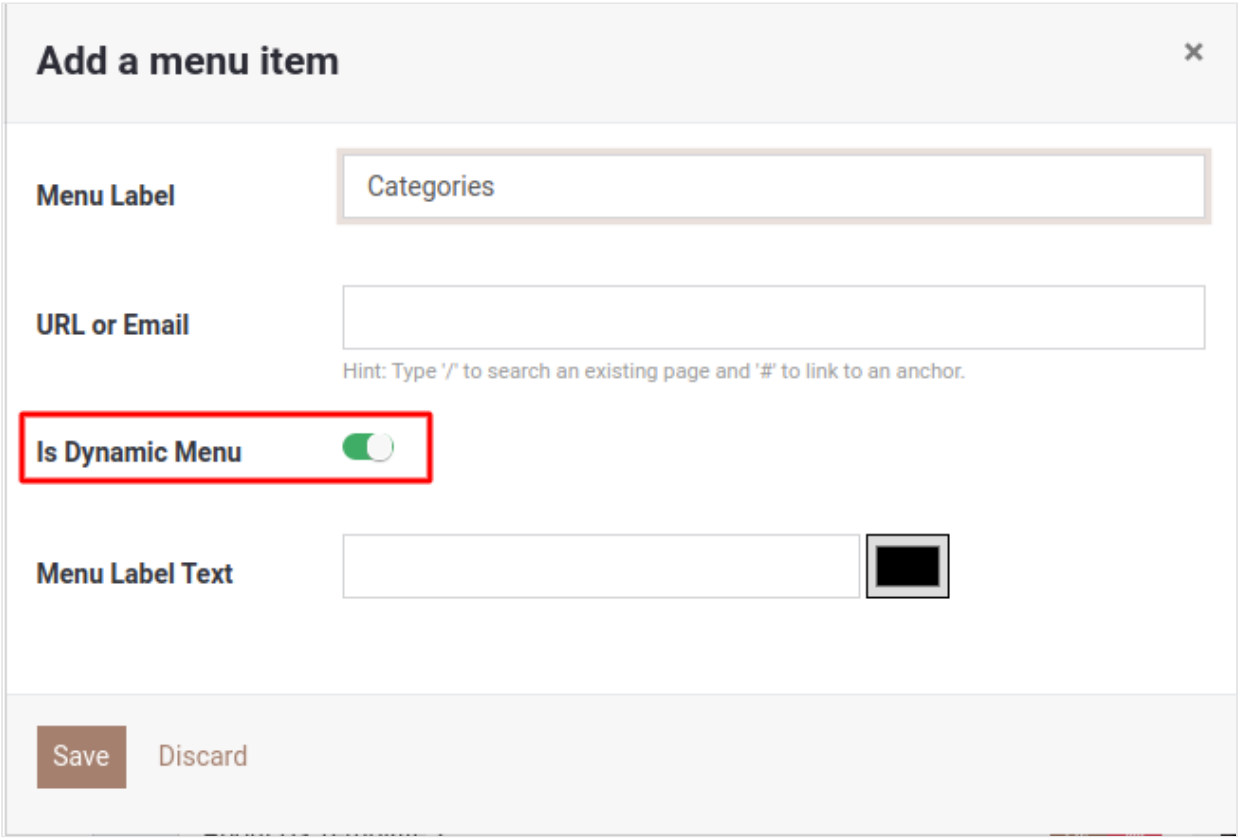
After selecting the header style, the offer text will available by default. If you want to delete or edit them, then simply click on the 'Edit' button from the top right of the webpage and edit that.

If you have deleted offer texts and you want that section back, then drag and drop the snippet named 'Header Offer Text' from the Inner Snippets category and save your changes.



How To Enable Dynamic Category Menu?

To enable the dynamic category menu, Go to Web Pages -> Pages -> edit menu and edit the menu which you want to set as a dynamic category menu.



As shown in the above screenshot there is one option to enable/disable the dynamic category menu.

After enabling this option, this menu will show a list of published categories. Please review the below screenshot for your reference.

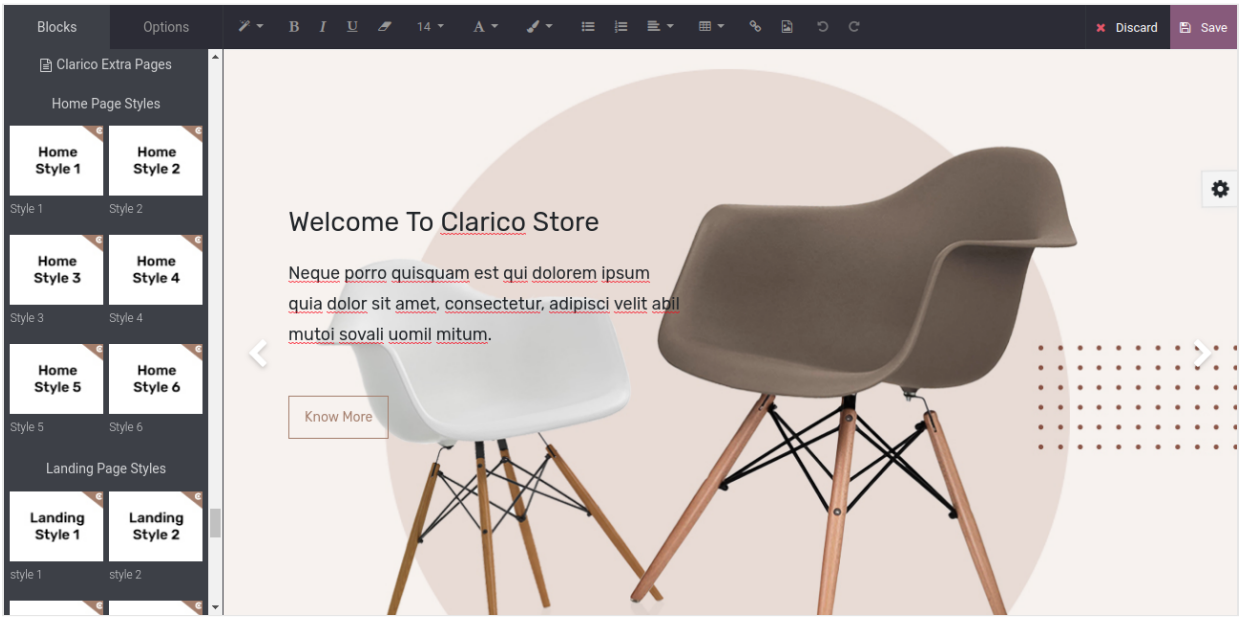
How To Apply Clarico Vega Extra Page Snippets?

We are providing various snippets of different pages in our theme Clarico Vega. There is no hassle to design your website. You can easily select the various predefined snippets like 6 unique Homepage snippet, 3 About us snippets, 3 Service snippet, 1 Contact us snippet and 4 Our Team snippet in order to design your website more pretty.

Note: You can find the page styles inside the snippet editor. You just need to create your page and apply the snippet.



Mega Menu

To create a mega menu, go to a Web Page -> Pages -> Edit Menu and click on "Add Mega Menu Item". It will show one popup to create a mega menu record.

Menu 2
Blog

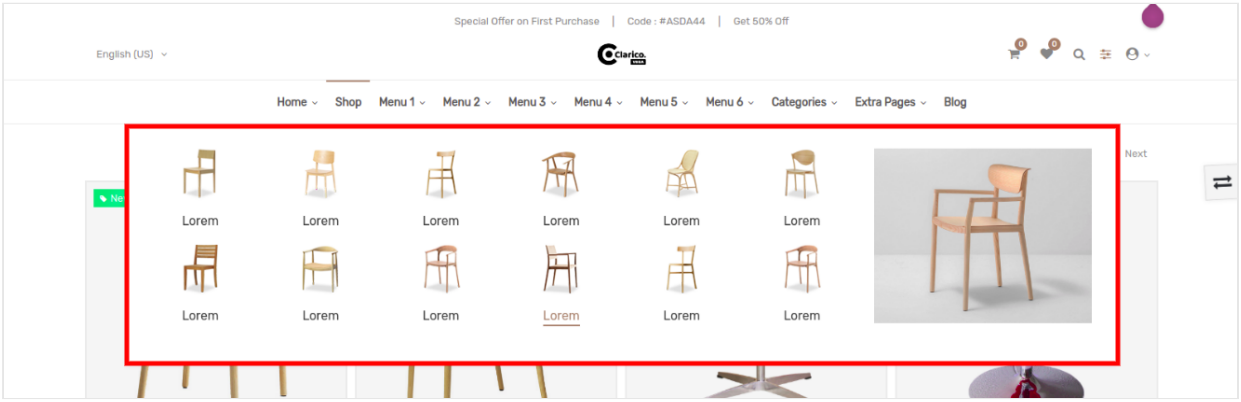
To make the mega menu look pretty, we provide 6 snippets to change the mega menu design as per your business needs.

Steps to set the mega menu style :

- Step 1: Go to the web page and click on the edit button in the top right corner of the web page.
- Step 2: Click on the mega menu in which you want to change the design.
- Step 3: Check the snippets list on the left side of the web page. There are 6 snippets available to change the menu styles.
- Step 4: Drag the snippet in the menu which you want to set and remove the old style that you set previously.



Menu Label

Using this feature, you can display one label top of the menu or right side of the menu. You can add the display text for the label as well you can configure the color of that menu label.

To enable/disable the Menu label functionality, go to Web Pages -> Customize -> Customize Theme -> Menu labels Text.

Steps to configure Menu labels:

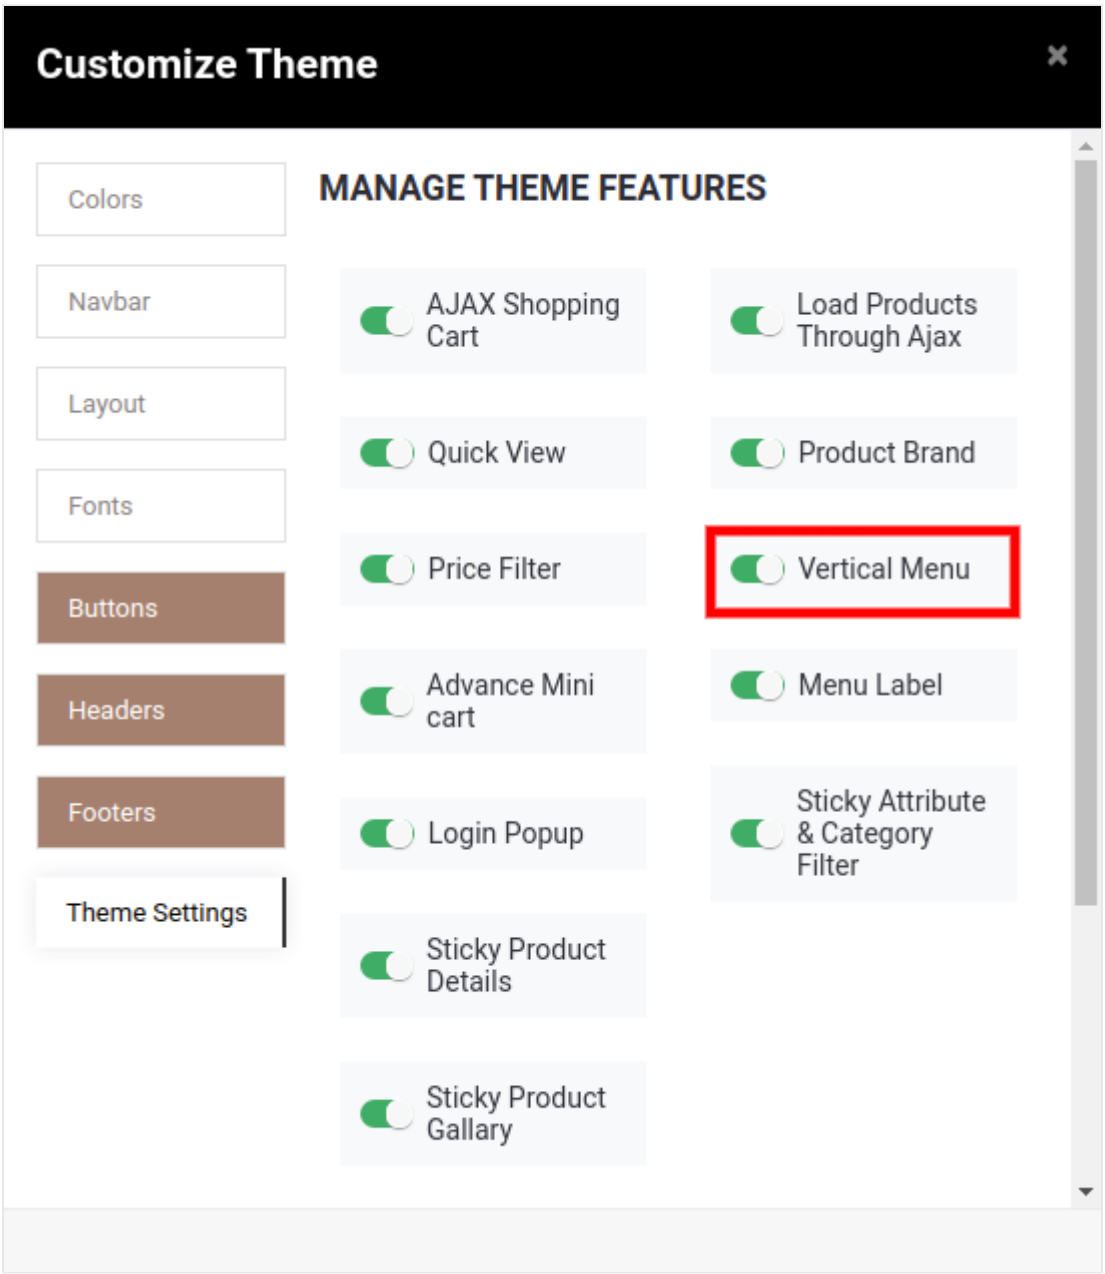
- Step 1: Go to the pages tab and click on the edit menu option. Edit menu will popup to select the menu.
- Step 2: Select the menu in which you want to apply the menu label. Click on the menu item and add a menu item popup will appear.
- Step 3: Enter the Menu label and Menu label text with the color that you want to have for the menu label and click on the save button.

Note: You can assign menu label and color at the time of menu creation from the website editor panel.

Vertical Menu

This feature provides you with one menu in the header section. It’s very handy when the user has multiple informative menus.

To enable/disable the Vertical Menu, go to Web Pages -> Customize -> Customize Theme -> Theme Settings and enable Vertical menu.



After enabling this feature you can see the vertical menu icon at the header of the website.

To edit the content of the vertical menu, click the vertical menu icon and go to the web page and click on the edit button in the top right corner of the web page and double click on the content to make changes as per your requirement.

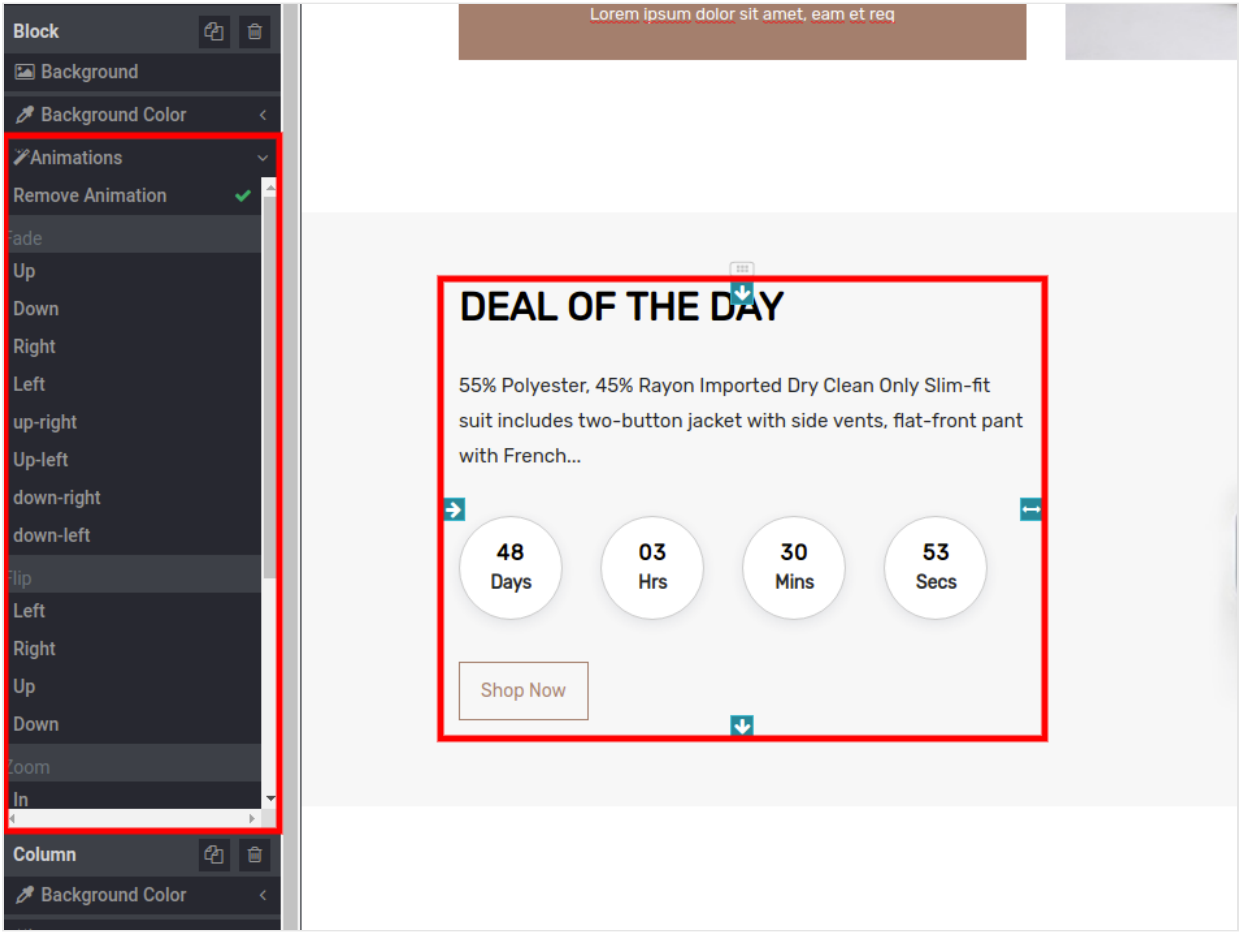
Animation Effect

You can set the animation effect to particular elements of the snippet.

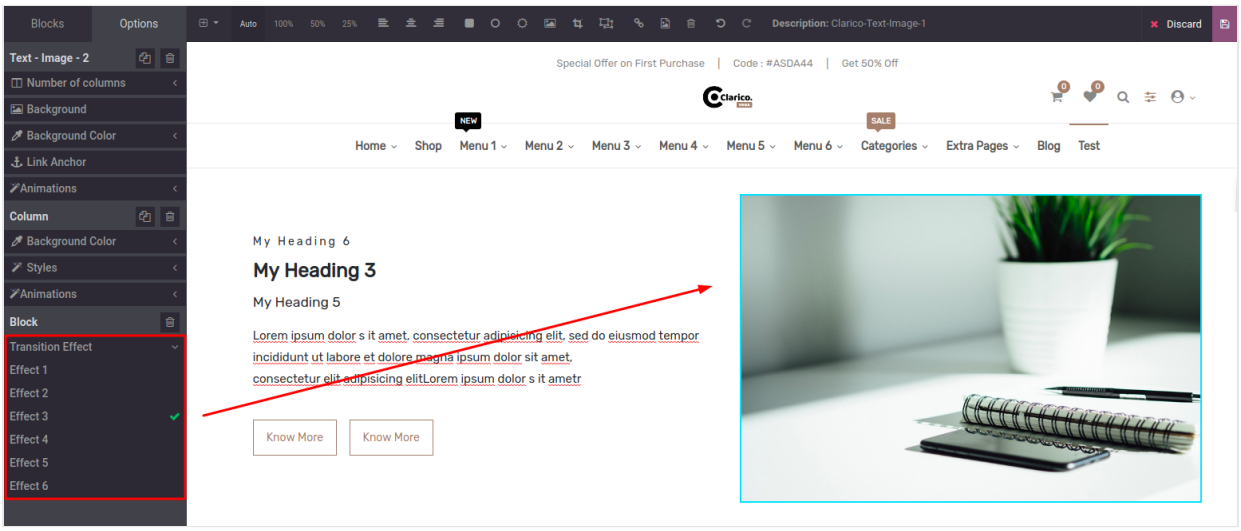
To set the animation effect on any element, go to the web page and click on the edit button at the top right corner. Then select any element and check the left-hand side of the web page. There is one menu like "Animation". Select any animation effect from the effect list and save your changes.



Transition Effect in Images

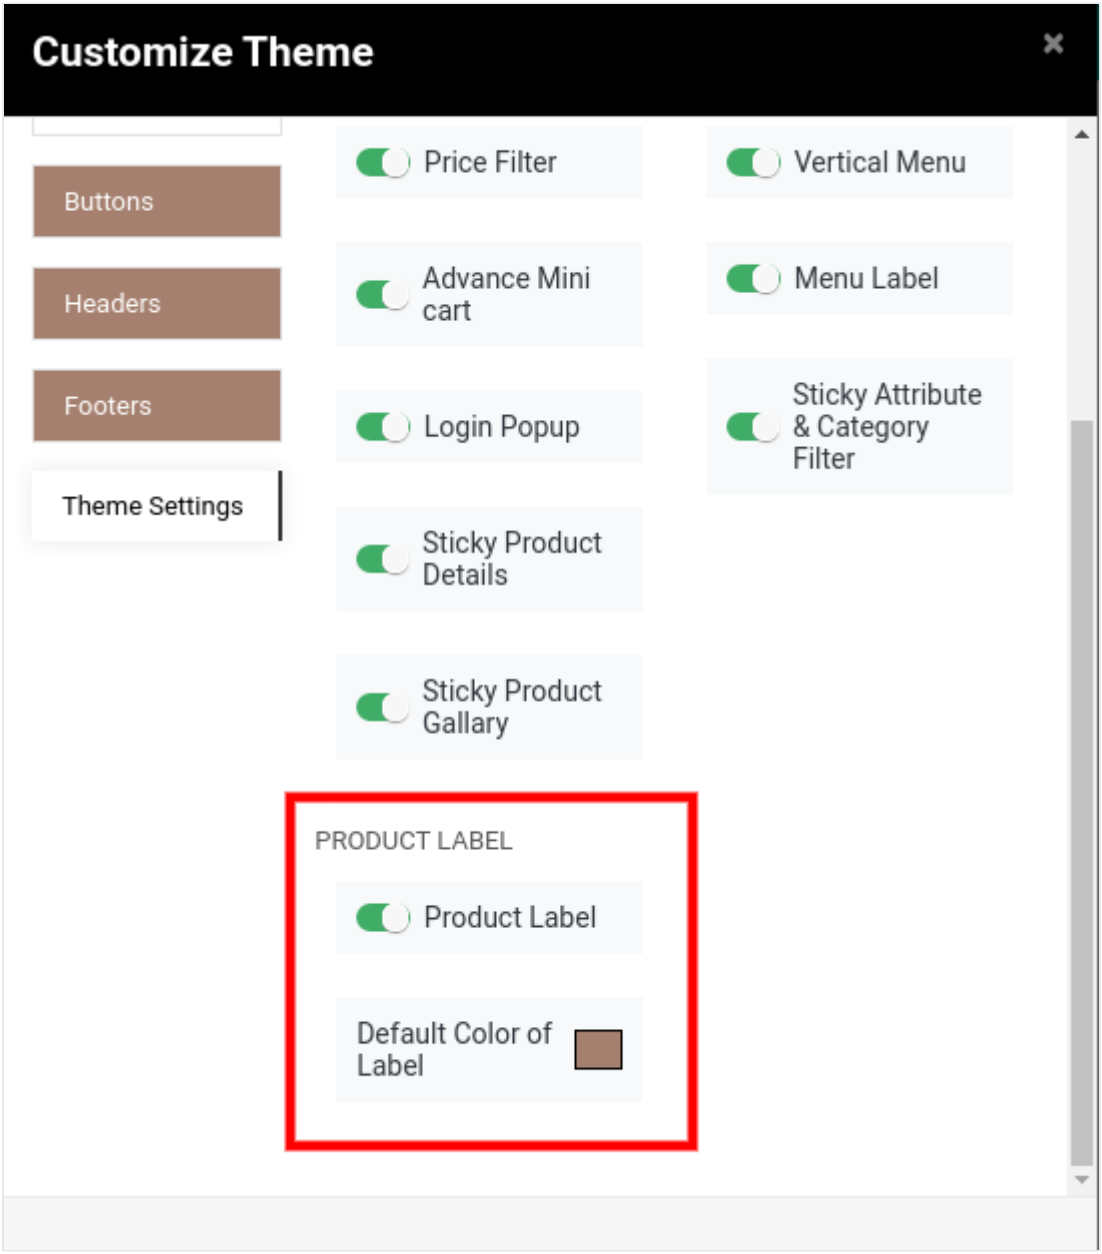
This features allows you apply some transition effects in any images of all the provided snippets. We are providing 6 types of transition effects in our theme. If you want to apply any of the styles then open that page in Snippet editor mode and select that specific image. After selecting that image, you can find 'Transition Effect' in Snippet editor as per the below screenshot. Apply the styles and save the page.

Note: You can apply this styles in images only, not in whole snippet behavior. You can apply this styles in images of static snippet. Its advisable that whenever you want to apply the transition style,first you upload your image then apply the effect. If you update your image then you need to apply transition effect after update the image.



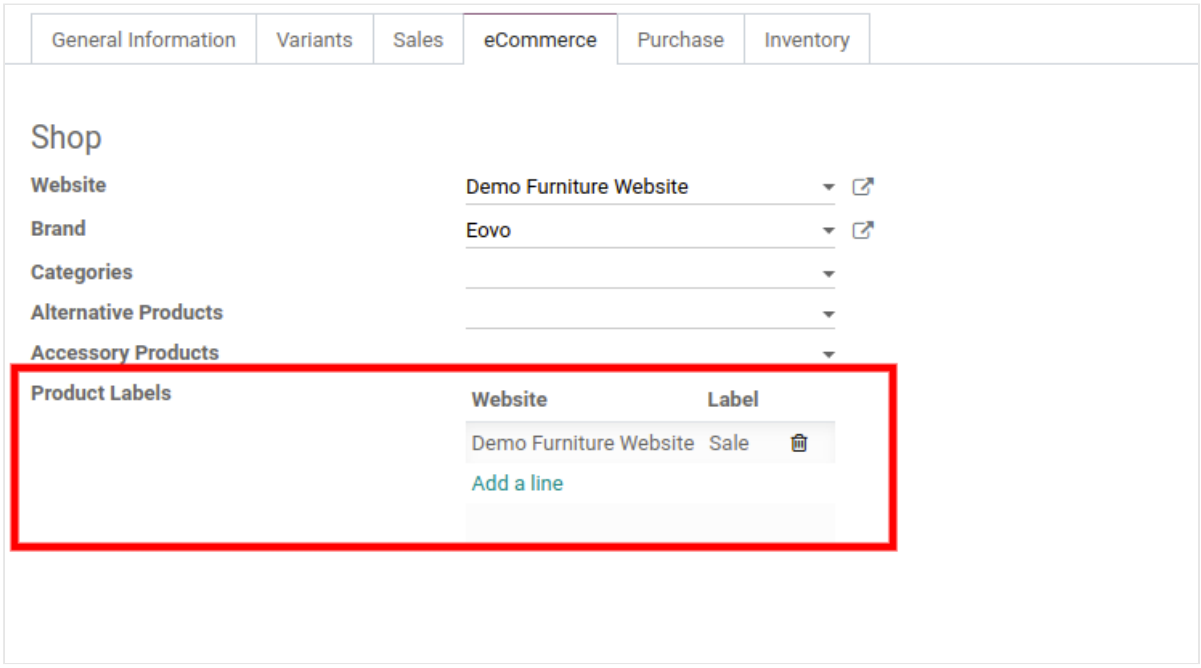
Product Label

To enable/disable the Product Label , go to Web Pages -> Customize -> Customize Theme -> Theme Settings and set Product Label. Also, You can select the default color of the label as per the below screenshot.

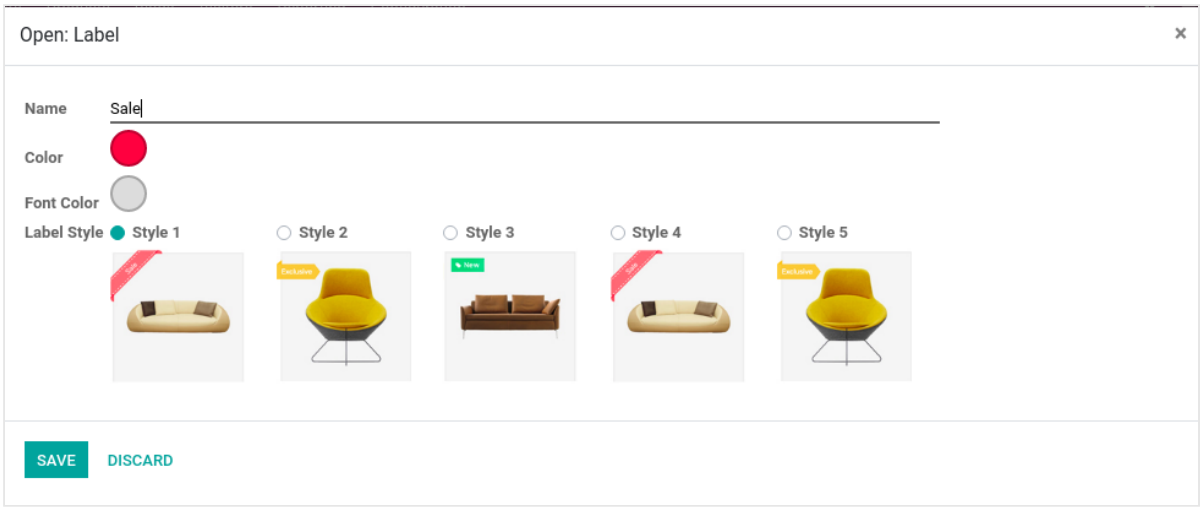


Steps to configure the product label:

- Step 1: In the admin side go to Website -> Products and click on the eCommerce tab. You can see that three is one field for setting the product labels.



- Step 2: Click on the add new line and set the website and label. If you don't have any label then you can also create by “create and edit” option and pop up will appear to fill the relevant details i.e Name, Color, Font Color and Label Style. Click on the Save button.



- Step 3: Save your changes and check on the web page. You can see the product label in the shop and product page.

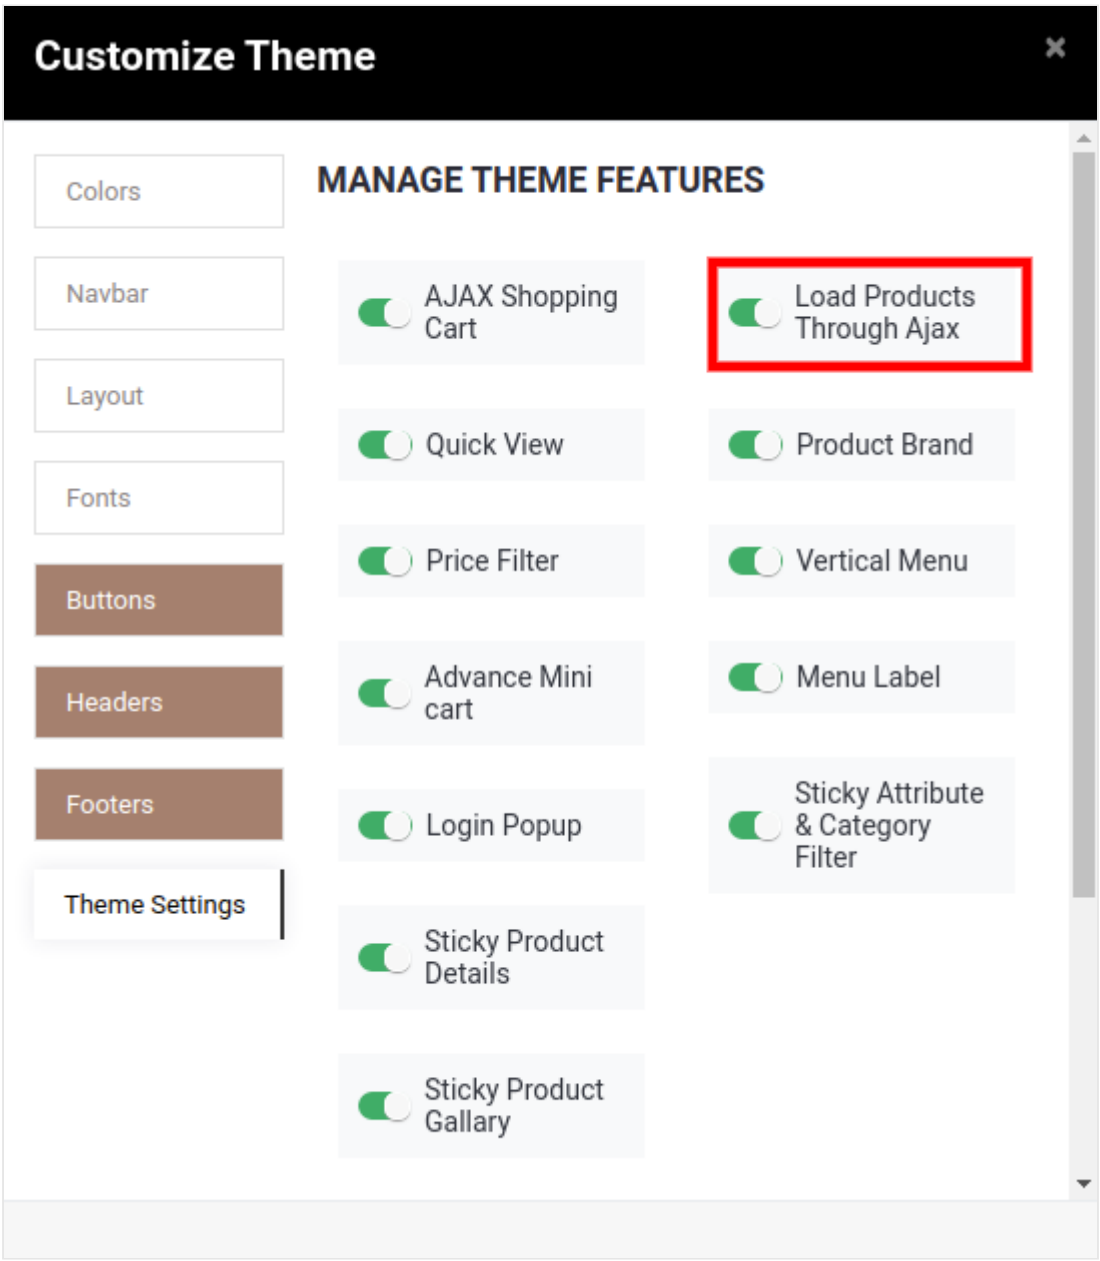
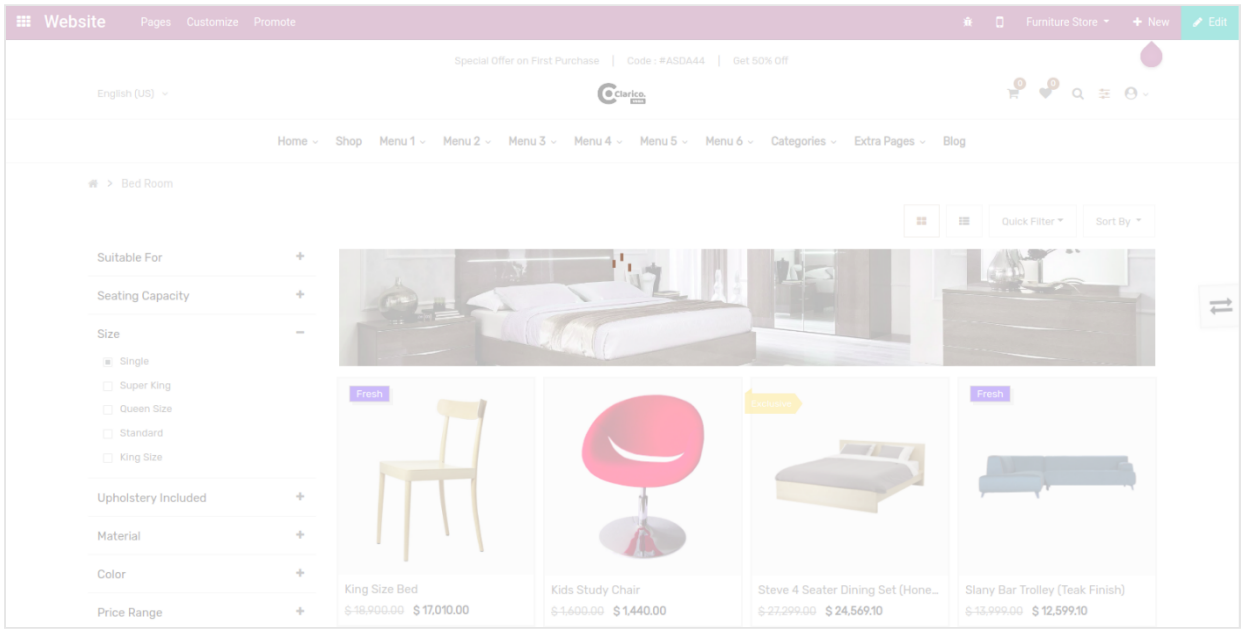
Load Products Through Ajax

This feature provides the attribute filter data through ajax without reloading the page.

To enable/disable the Load through ajax, go to Web Pages -> Customize -> Customize Theme -> Theme Settings and set configure it as per your need .

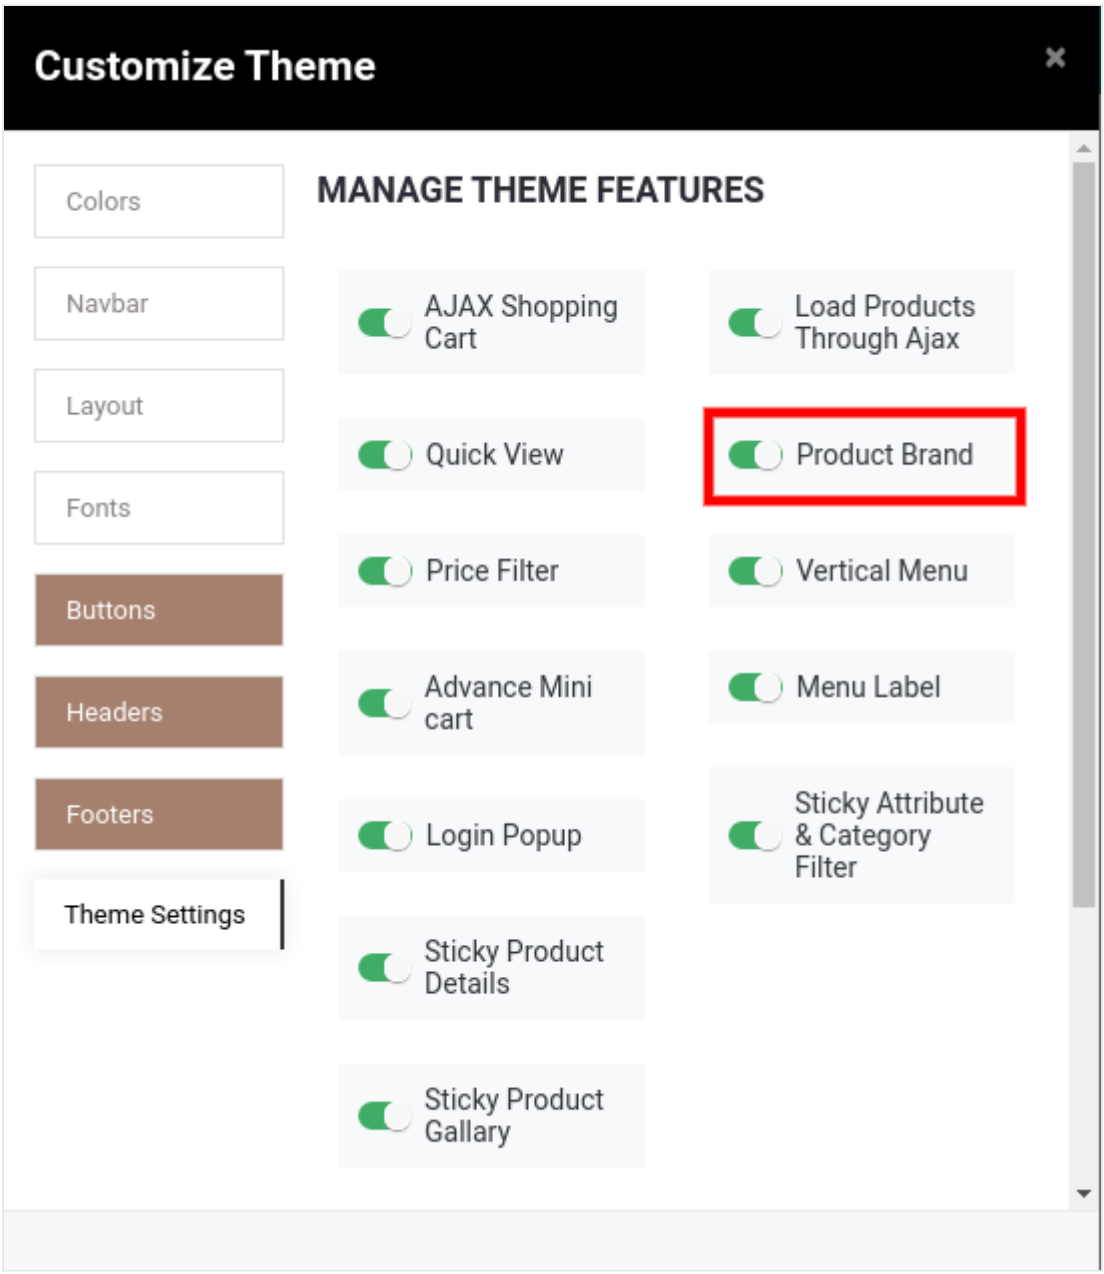




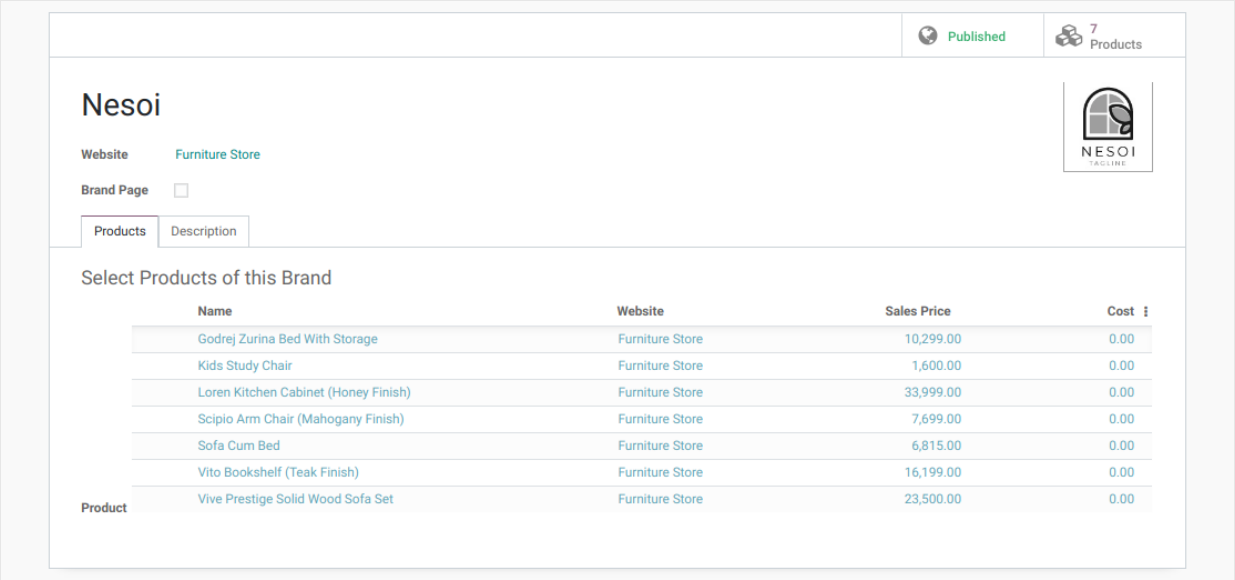
Note: Load Products Through the Ajax feature will work with attributes only.

Product Brand

To enable/disable the Product Brand, go to Web Pages -> Customize -> Customize Theme -> Product Brand

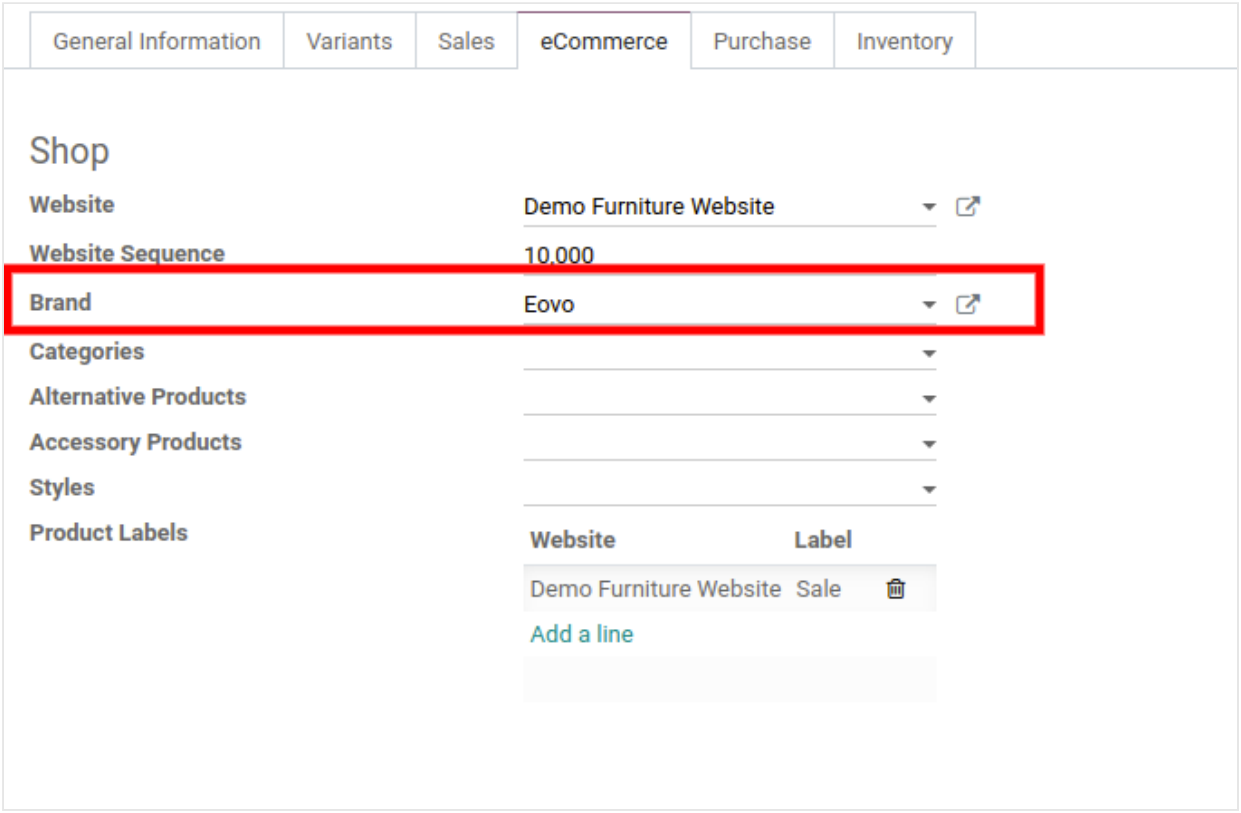


To create a brand, go to 'Website → Configuration → Product Brands'.



As shown in the screenshot, Fill up the details of your brand and it will be preferable to upload the logo size 130 X 130px. Also, don't forget to publish the brand.

After creating a brand, go to the product view and assign it to the product. Save the changes.



You can see configured brands in a filter of the Shop page.

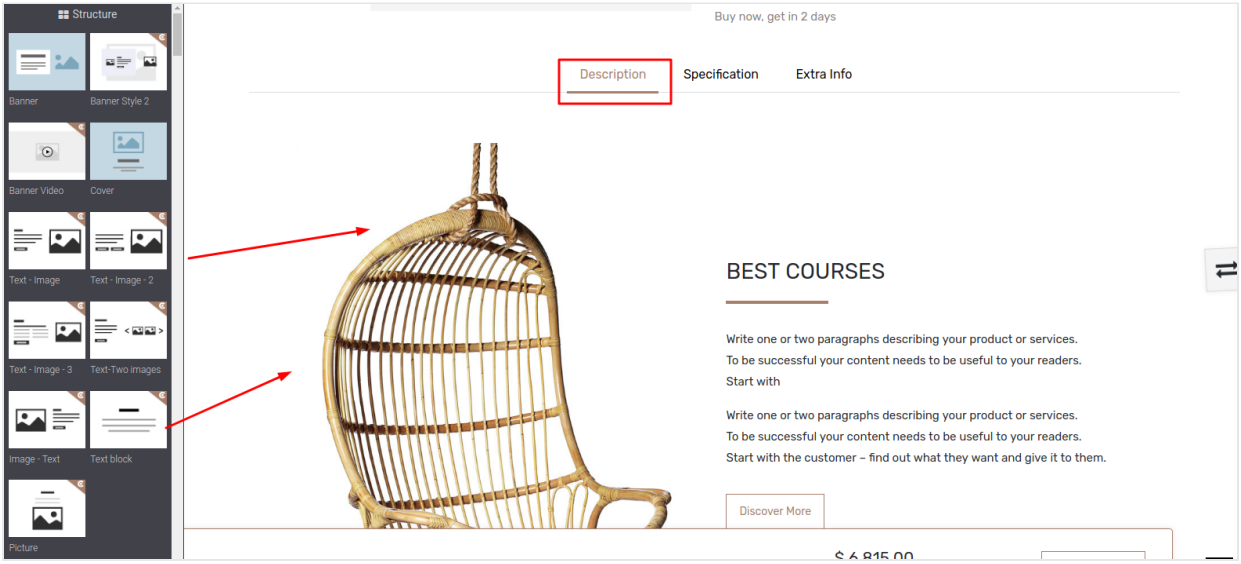
Product Description

Go to the product page in which you want to set description. Click on ‘Edit’. Drag and Drop any snippet in the ‘Description’ portion and Save the Changes. The product description will be displayed in the description tab section.

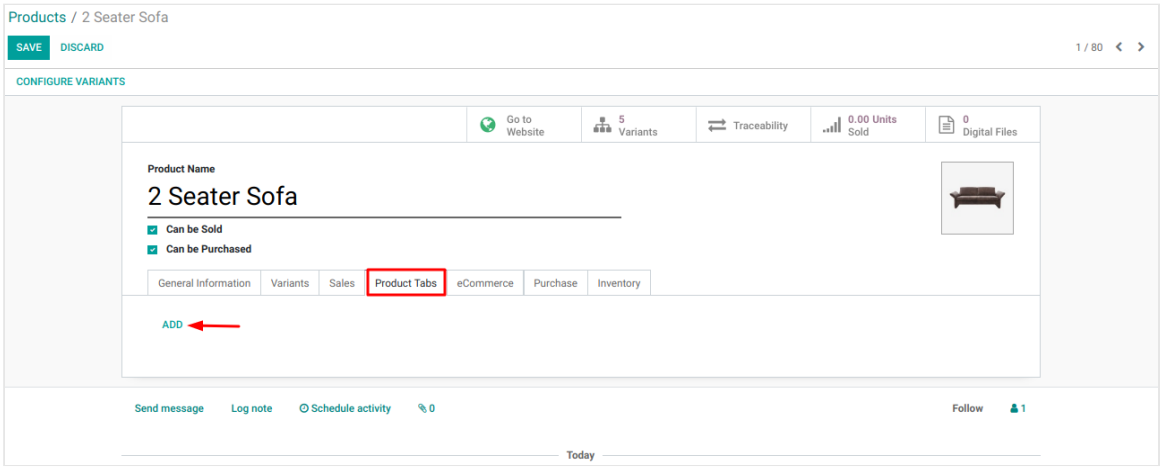


Dynamic Product Tabs

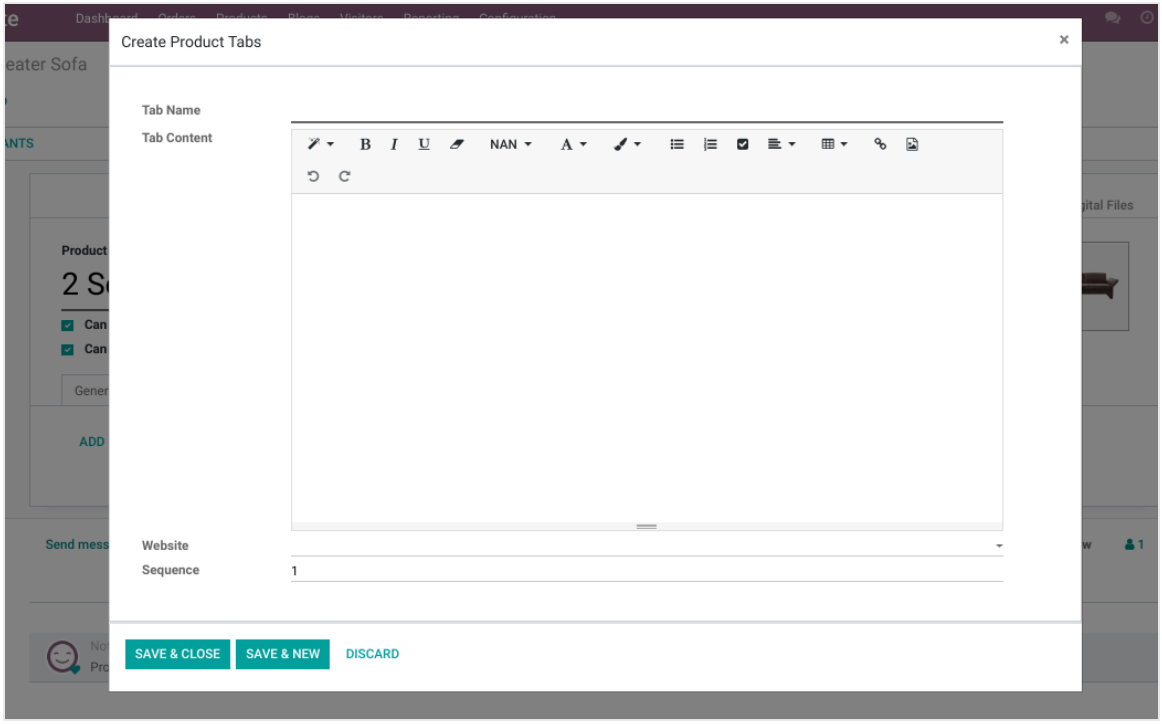
You can easily configure multiple tabs on the product page with this feature. The product tabs can be designed wisely and displayed in the product tab section.

Steps to configure Dynamic product tabs:

› Step 1: Go to the Product backend of a particular product where you want to add the extra tab and click on the edit button.

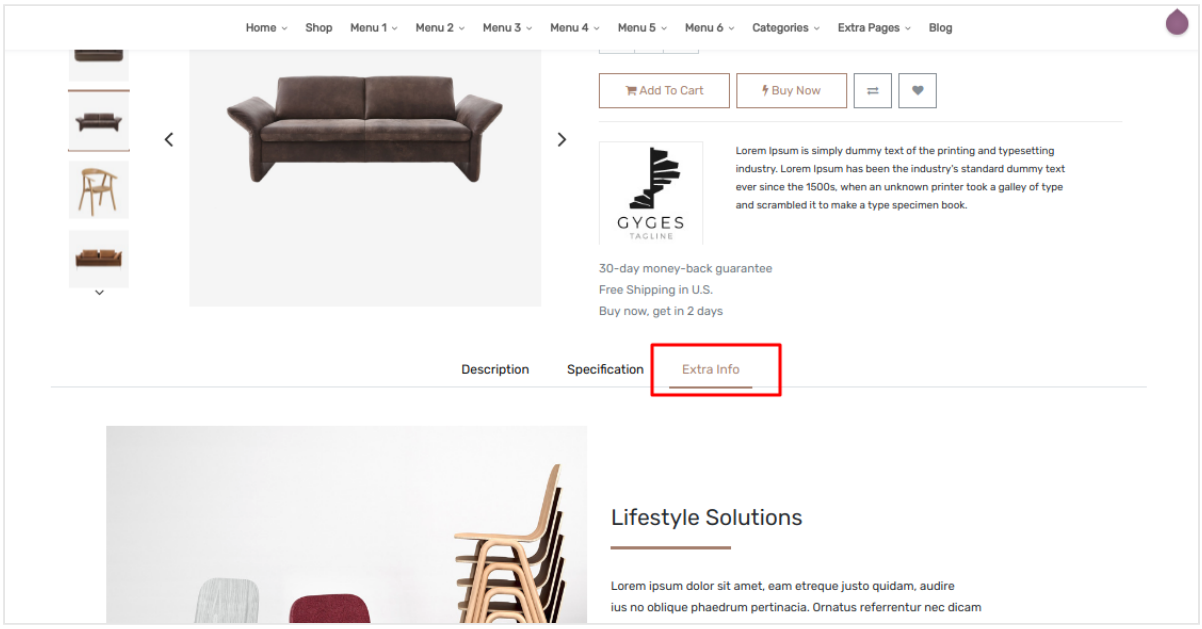


› Step 2: Simply go to the Product tab option, you will find the “Add” link. By clicking on the “Add” link Create Product Tabs popup will appear. Specify the Tab name, Content (you can directly add Html content over there) and you can set this option for web-site as well.



If a website is not selected while creating a tab then it shows in every web-site where we installed theme and save the changes.

- Step 3: Go to the product front end, you will find the extra product tab on that particular product page.



Note : By default there are 3 tabs available and we can add up to a maximum of 4 extra tabs.

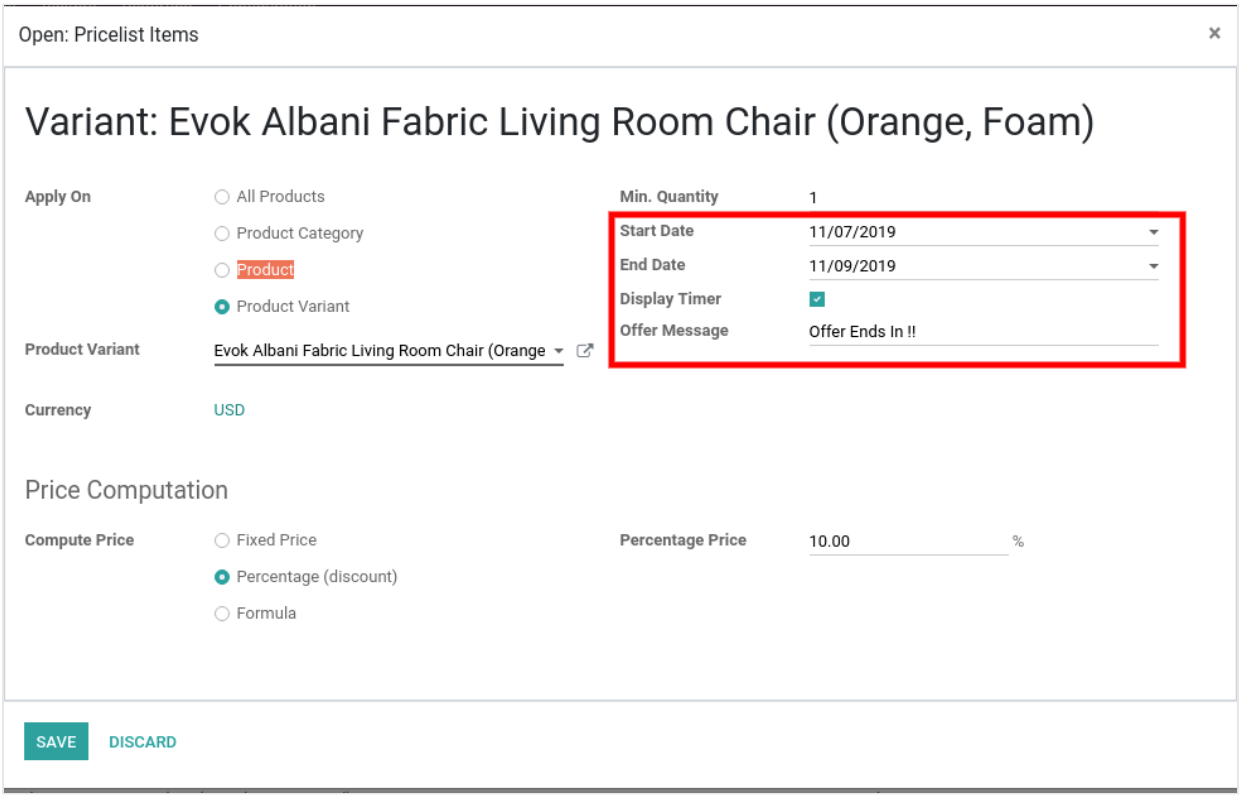
Offer Timer

We are providing offer timer based on All Products, Product Category, Product and Product variants.

It shows the remaining time countdown of product offers on a product page.

To configure the offer timer, you need to configure a pricelist. Make sure the discount and multiple sale pricing are activated from the website settings.

Once you click on Add a line of pricelist, One pop up will open. Select appropriate 'Apply on' option and configure Start Date, End Date, Display Timer and Offer Message.



Save the changes and go to that product from the front end.

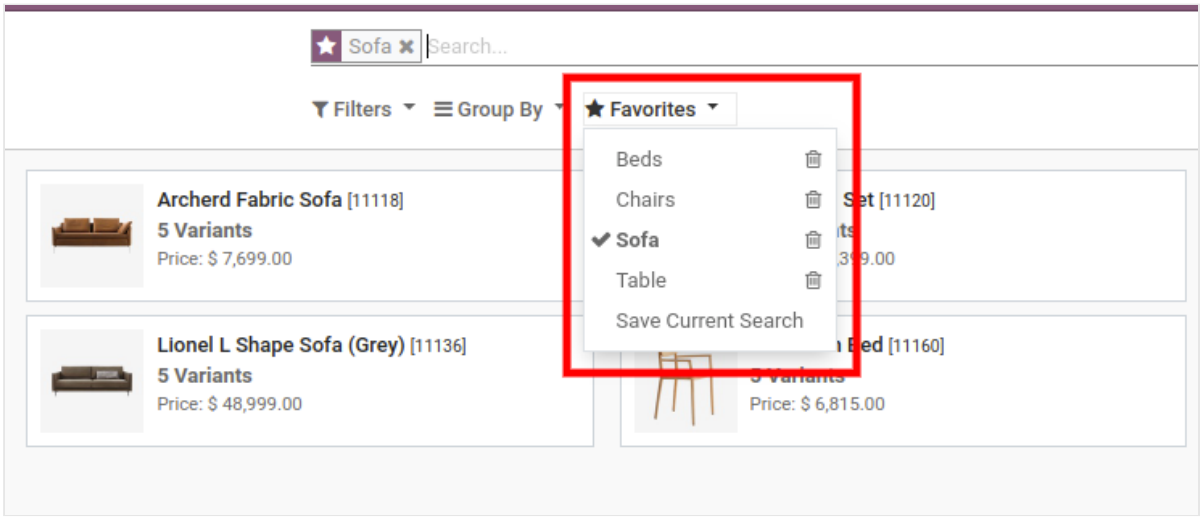
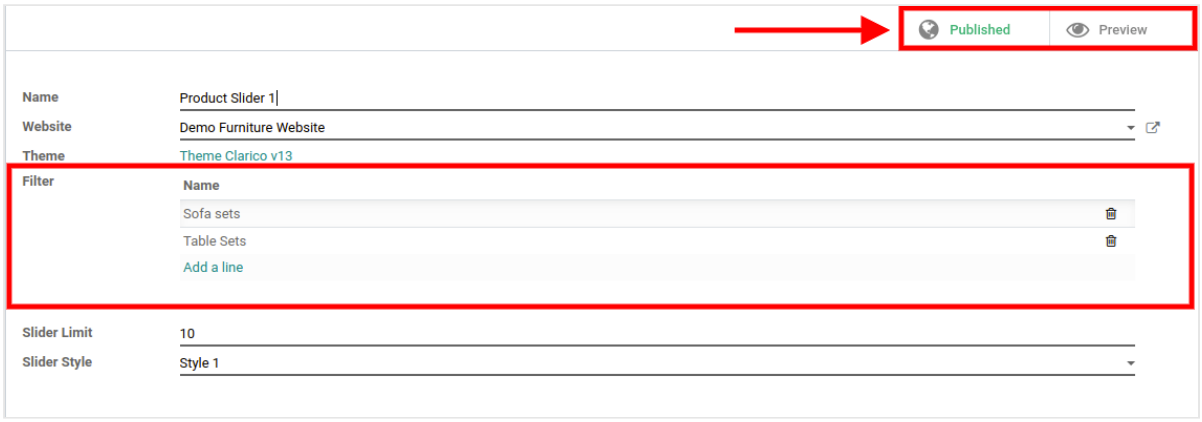
Product Slider

Steps to configure the product slider:

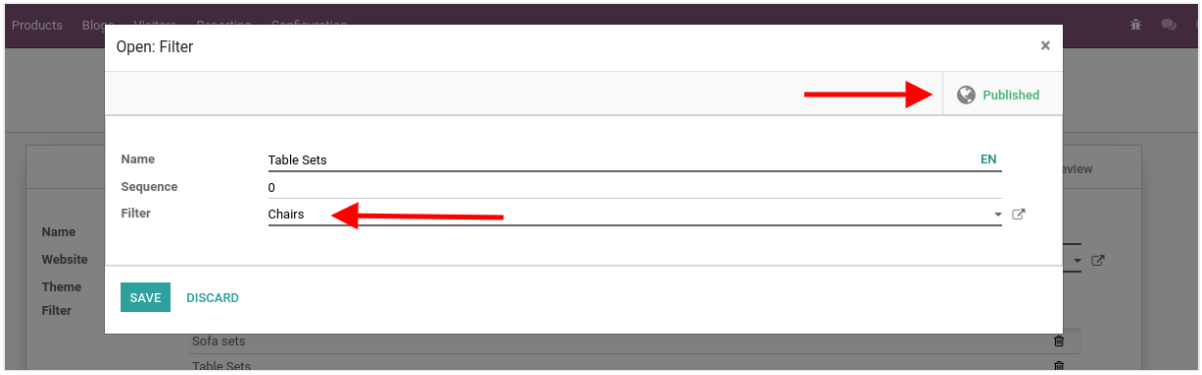
- Step 1: To configure the product slider, first you need to create a filter from the Product Template view. As shown in the below screenshot, go to the product view and create a filter by searching the products and save the filter.



- Step 2: After configuring the filter. You need to create a slider record for configuring slider. For that go to Admin side, Website -> Configurations -> Slider -> Sliders.

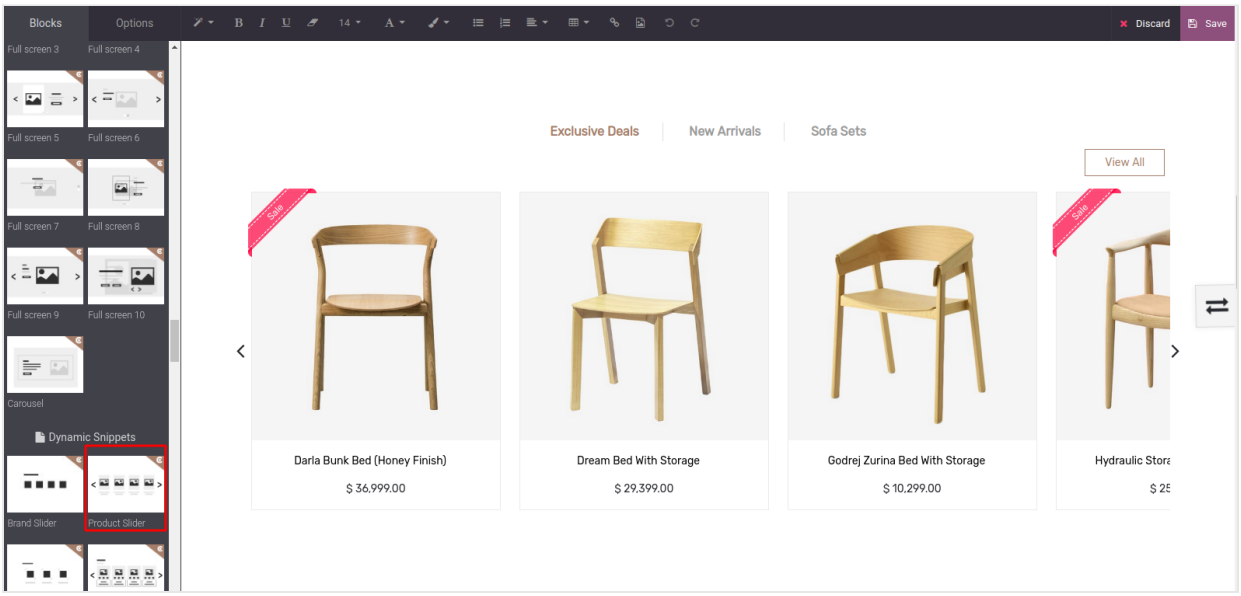


- Step 3: Once you click on add a line, one popup will open. Select the filter and publish that.



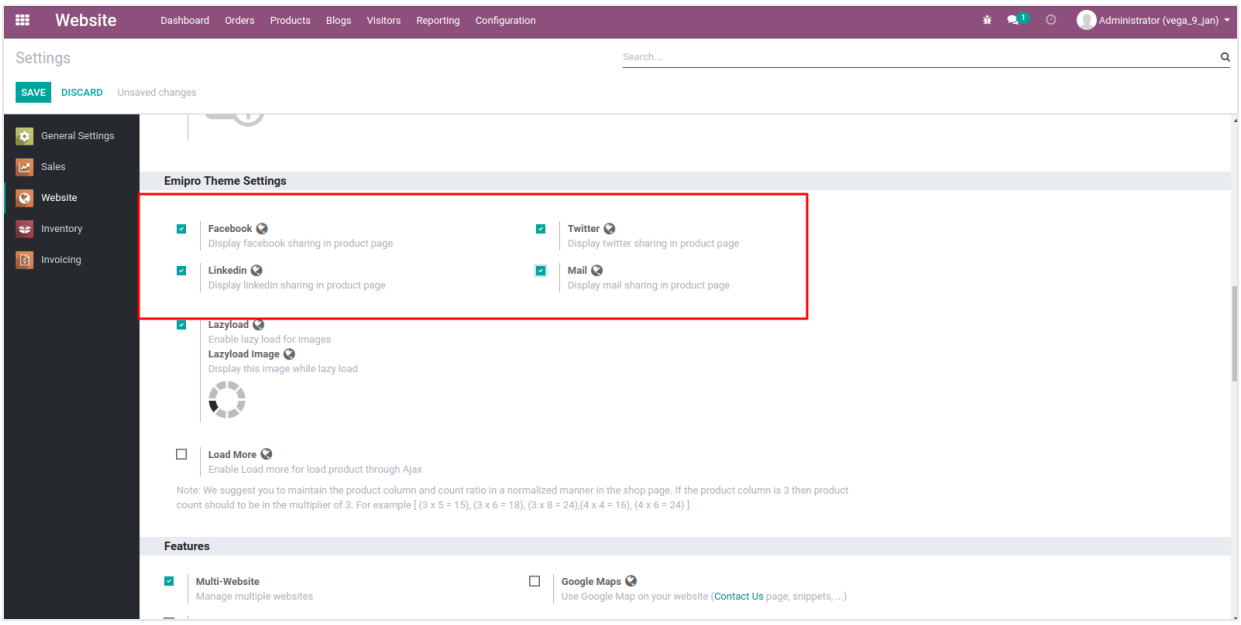
- Step 4: Set products limit and select slider style. 4 different slider styles are provided in this theme. Each style contains different designs. After selecting slider styles, activate the record from the top right. You can also get a preview of styles by clicking on the preview button at the top right corner.
- Step 5: Now, Go to the webpage and drag and drop ‘Slider’ snippet from Dynamic snippet category.

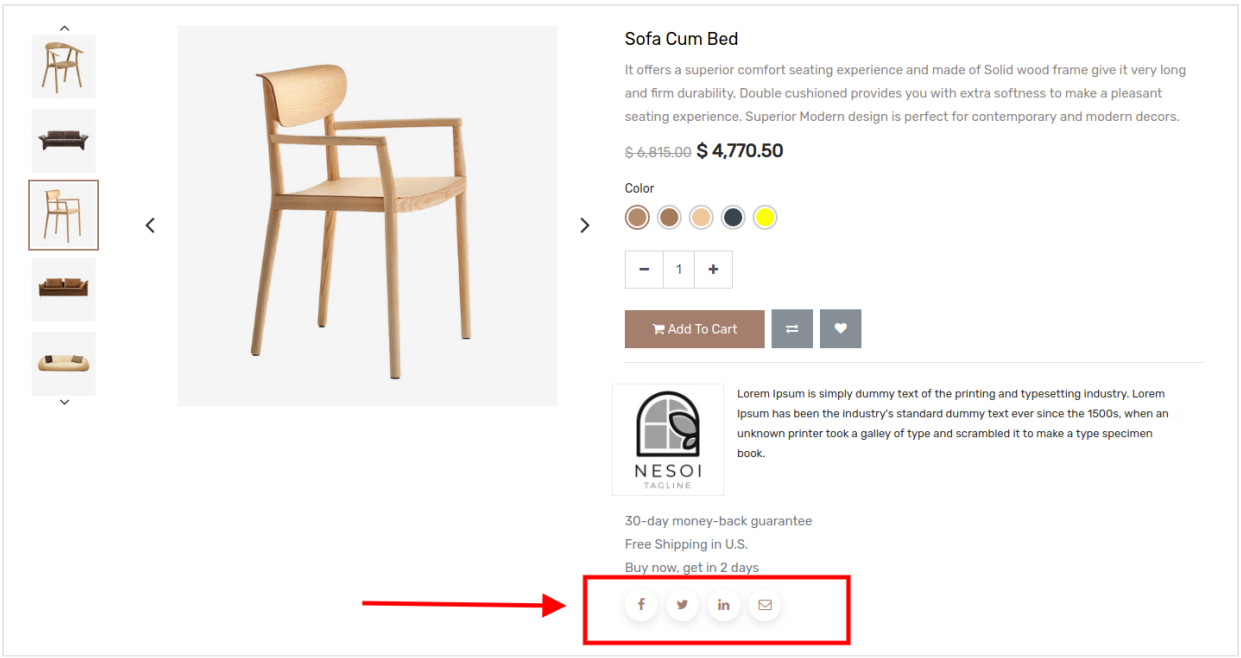
Note: Do not forget to publish this record by clicking on the “Published” button at the top right corner. If you don’t publish this record, products will not be visible at the front end.



Product Social Sharing

To configure Social share feature. Go to Admin side, Website -> Configuration -> Settings. There is one of "Product Social Sharing". Select the social checkbox which you want to set on the product page and save your changes.





Quick View

Once you enable that option, you can see the Quick view effects in New product slider, Best seller, all offers snippets and other product sliders having dynamic snippet.

To enable/disable the Quick View, go to Web Pages -> Customize -> Customize Theme -> Theme Setting and configure it.

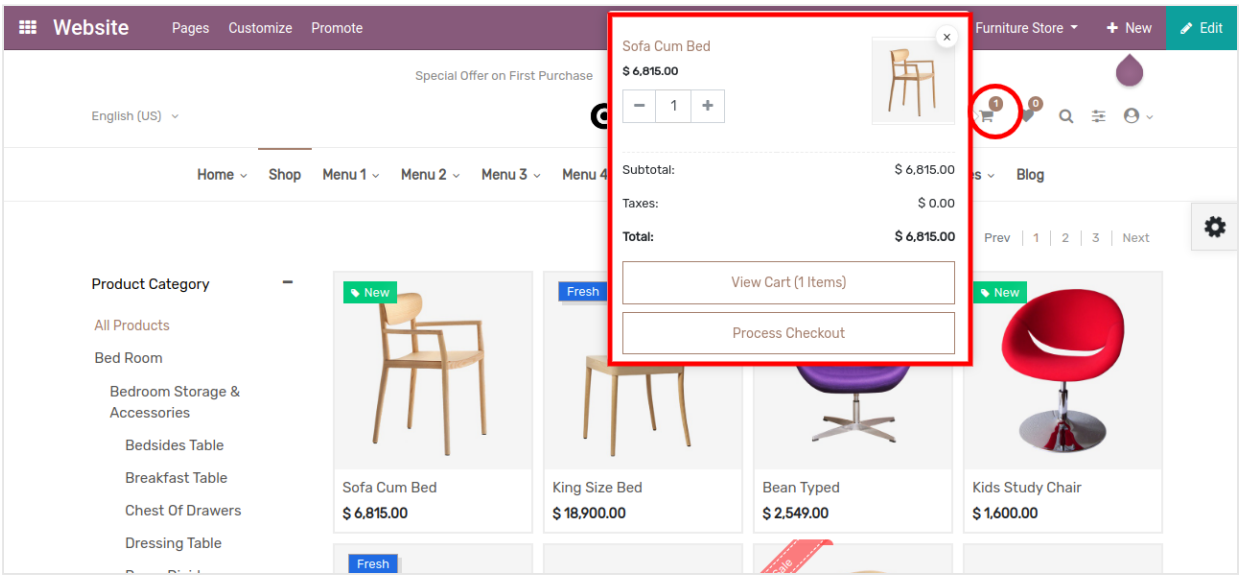
Advanced Mini Cart

This feature allows the customer to remove the product from cart, increase/decrease the product quantity from the cart without navigating to cart page.



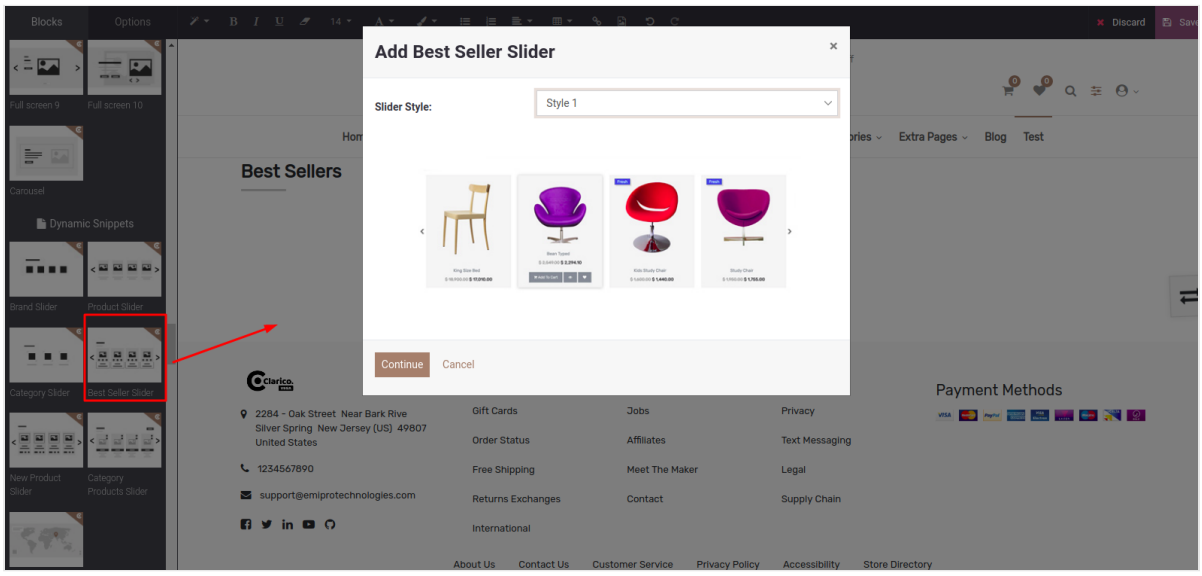
To enable/disable the Advance mini cart functionality, go to Web Pages -> Customize -> Customize Theme -> Manage Theme Features.

Bestseller Slider

Bestseller product slider is designed and structured according to the default Odoo workflow. It will take into account the data(Statistics) for the last 8 days of product sales. This snippet can be used anywhere on your website, according to your needs.

Steps to configure Bestseller Slider:

- Step 1: Go to the web page and click on the edit button in the top right corner of the web page.
- Step 2: Drag and drop 'Bestseller Slider' snippet from Dynamic snippet category and select the style from the slider style dropdown as per your requirement and click on Continue button.



- Step 3: Save your changes and check on the web page. You can see the Best seller slider on that particular page.

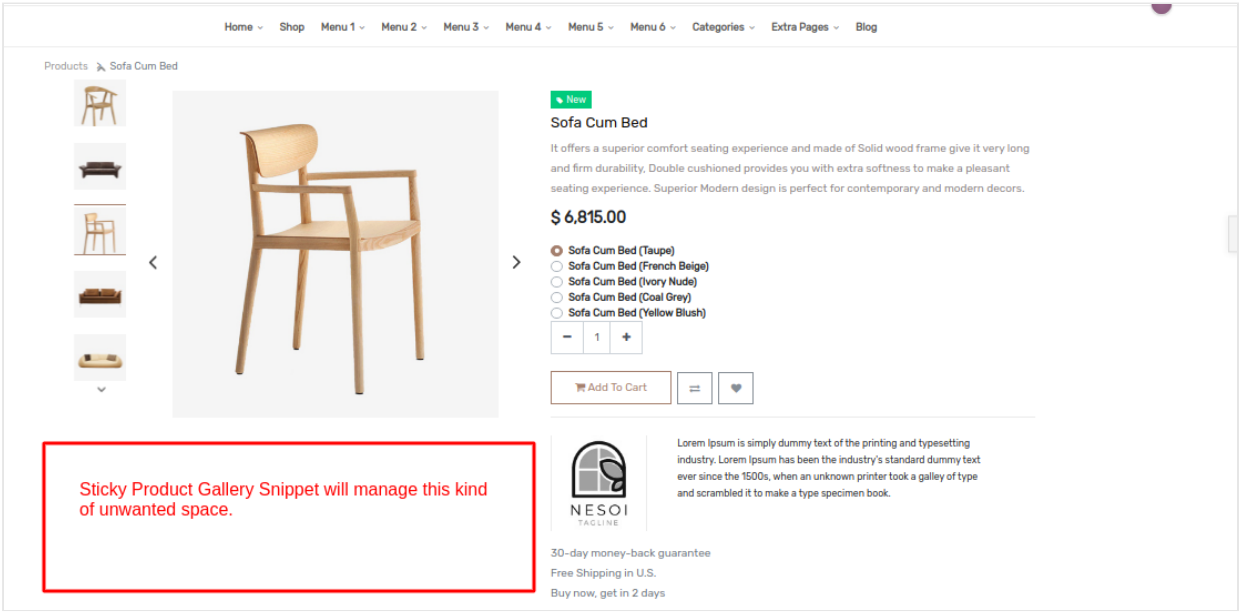
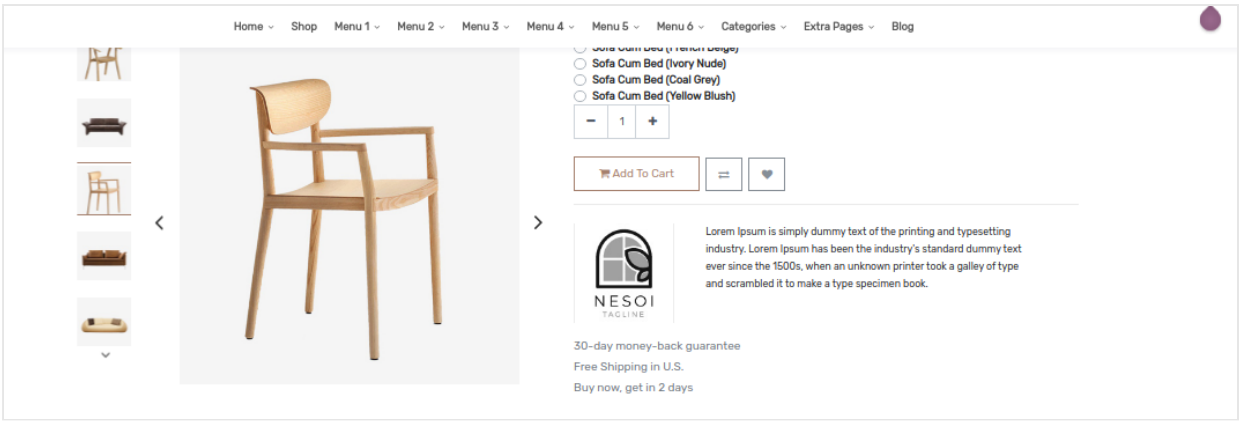
Sticky Product Gallery

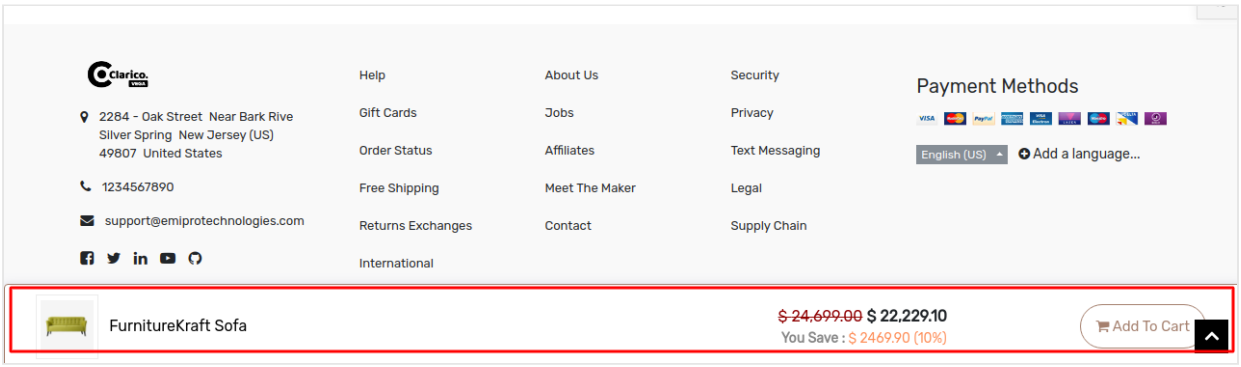
This feature sticks the gallery of the product on the Product page. If there are many variants on the product page, then we use this feature to handle some unnecessary space. The product image of the product will remain sticky until the product information bar ends.



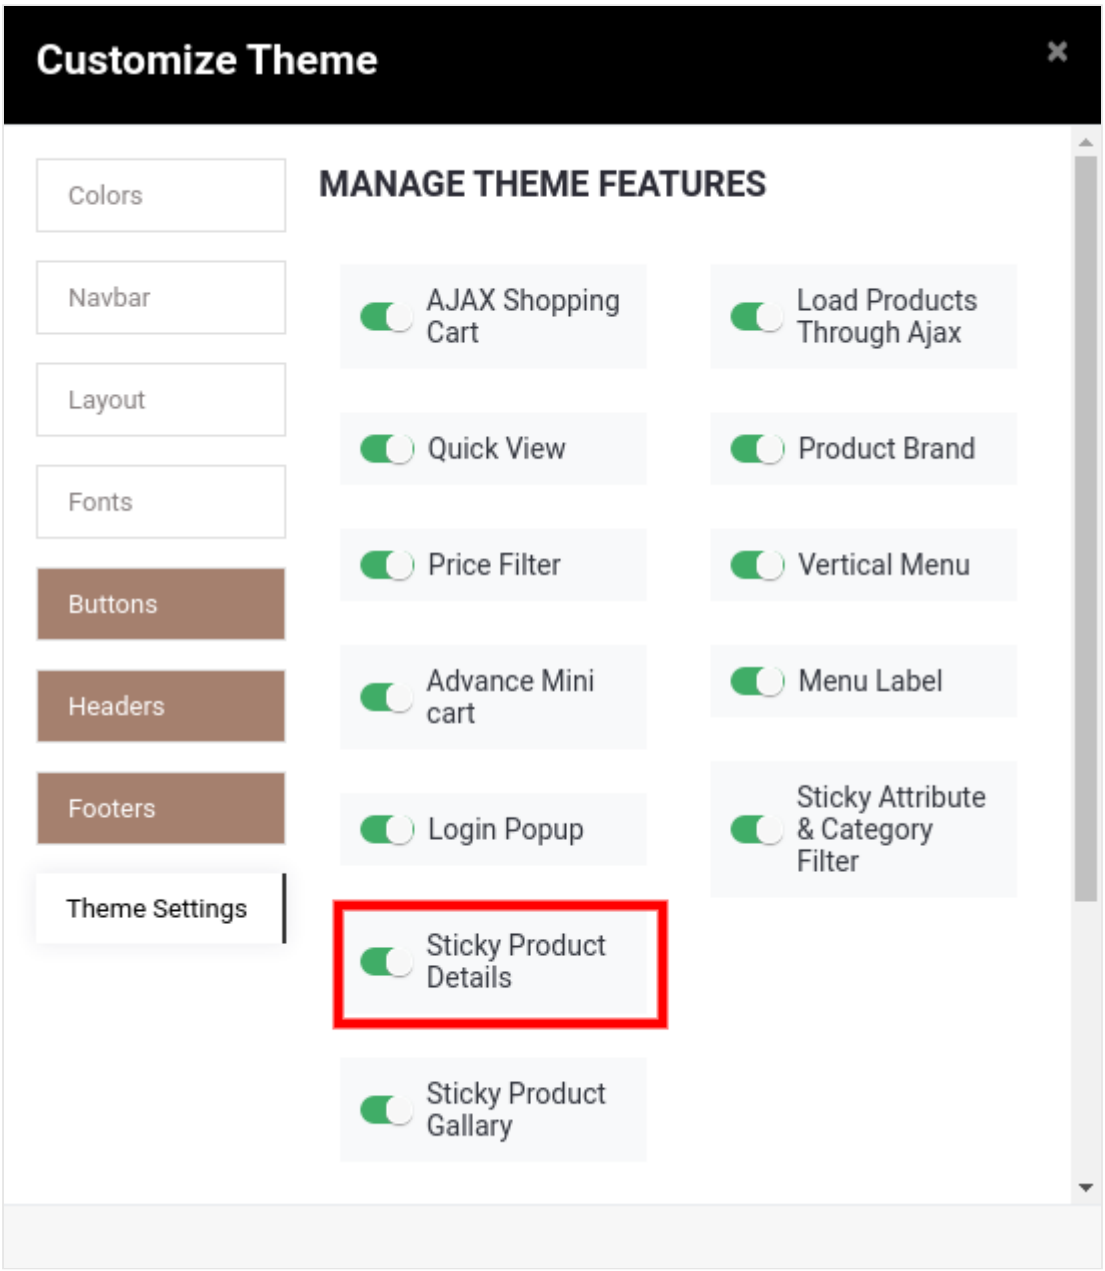


Sticky Product Details

This feature sticks product details such as product image, price information at the bottom of the page with the Add to Cart button and Buy Now option. This feature allows customers to increase the efficiency of the cart to the items.



To enable/disable the Sticky Add to cart and Buy Now option functionality, go to Web Pages -> Customize -> Customize Theme -> Sticky Product Details. Once you enable that option, you can see the Product name, Price, Add to Cart button and Buy now button at the bottom of the product page.

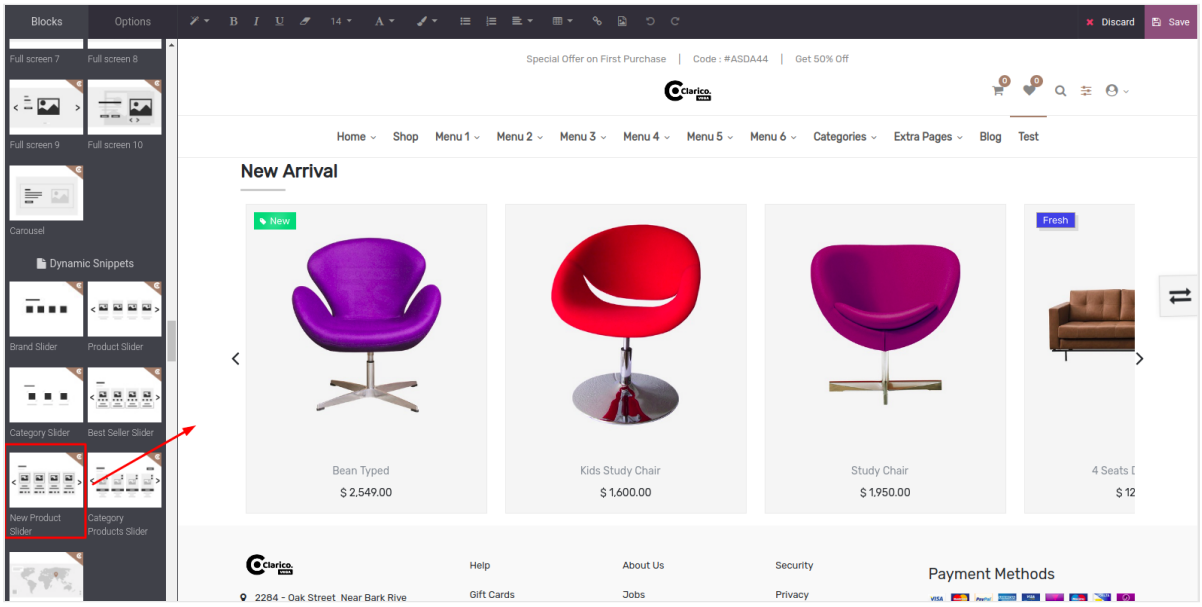


New Product Slider

New Product dynamic slider is used to get the dynamic collection of new products that have been uploaded recently. The data(Statistics) for the last 10 products uploaded will be taken into account.

Steps to configure New product Slider:

- Step 1: Go to the web page and click on the edit button in the top right corner of the web page.
- Step 2: Drag and drop ‘New Product Slider’ snippet from Dynamic snippet category and select the style from the styles dropdown slider as per your requirement.



- Step 3: Save your changes and check on the web page. You can see the New Product slider on that particular page.

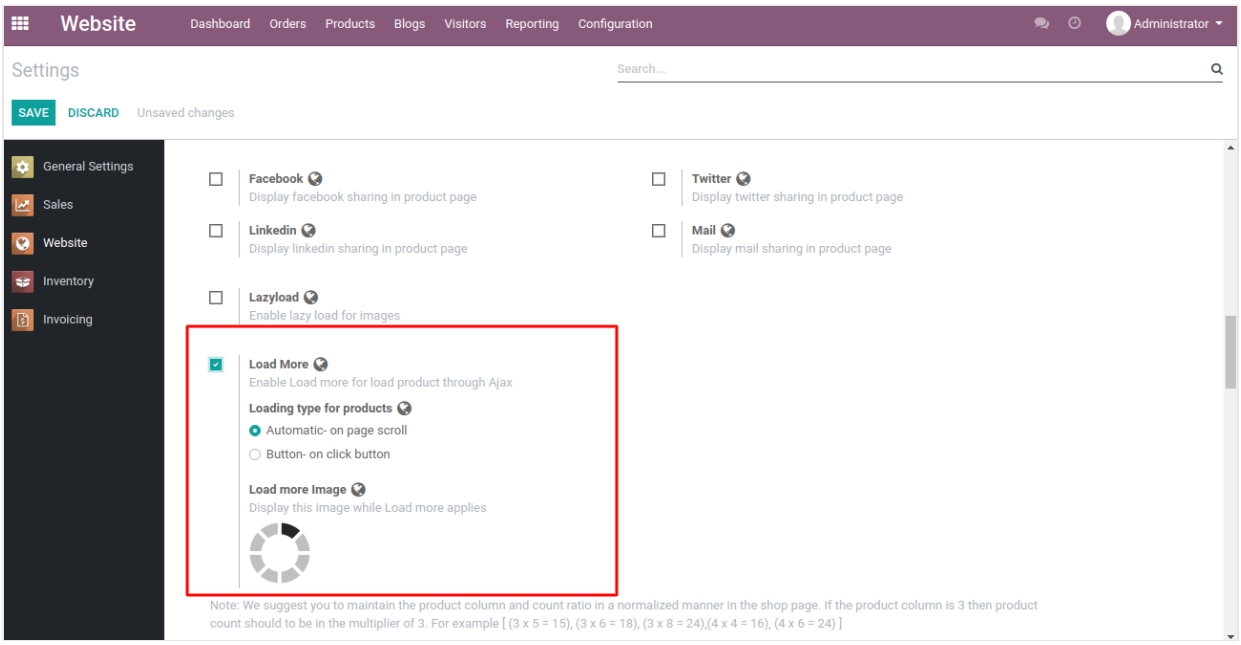
Load More Products

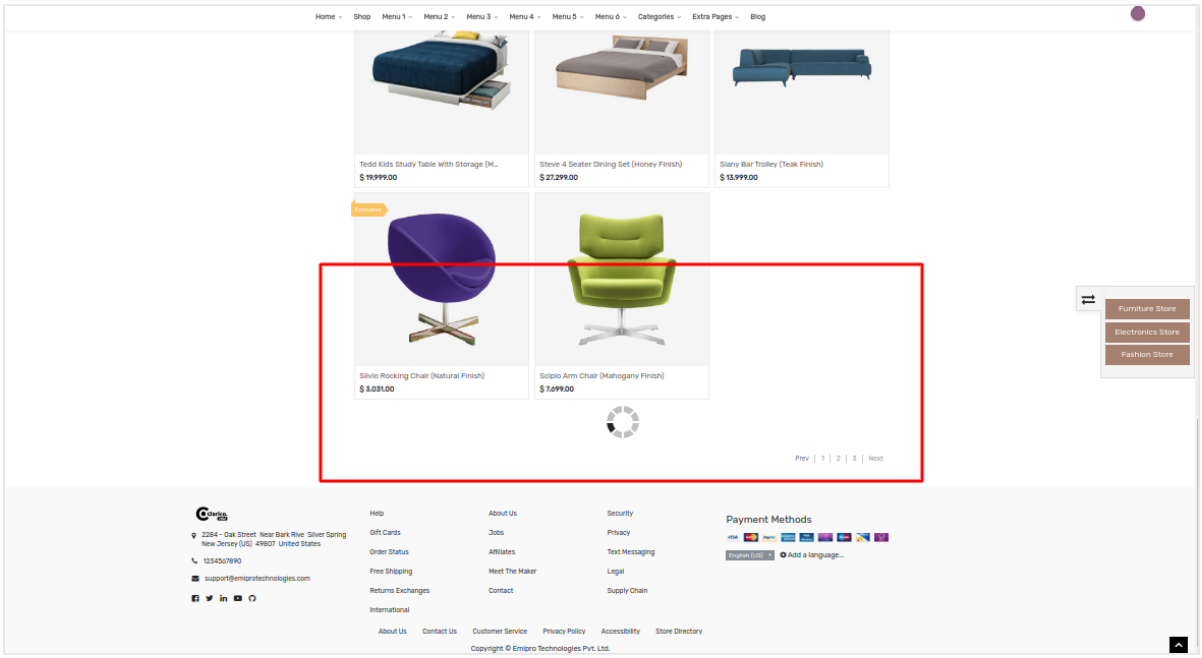
Infinite Scroll / Load more is use to load more products through Ajax without refreshing the page.

To enable/disable the Infinite scroll/ Load More functionality, go to Website module -> Configurations -> Settings -> Load More

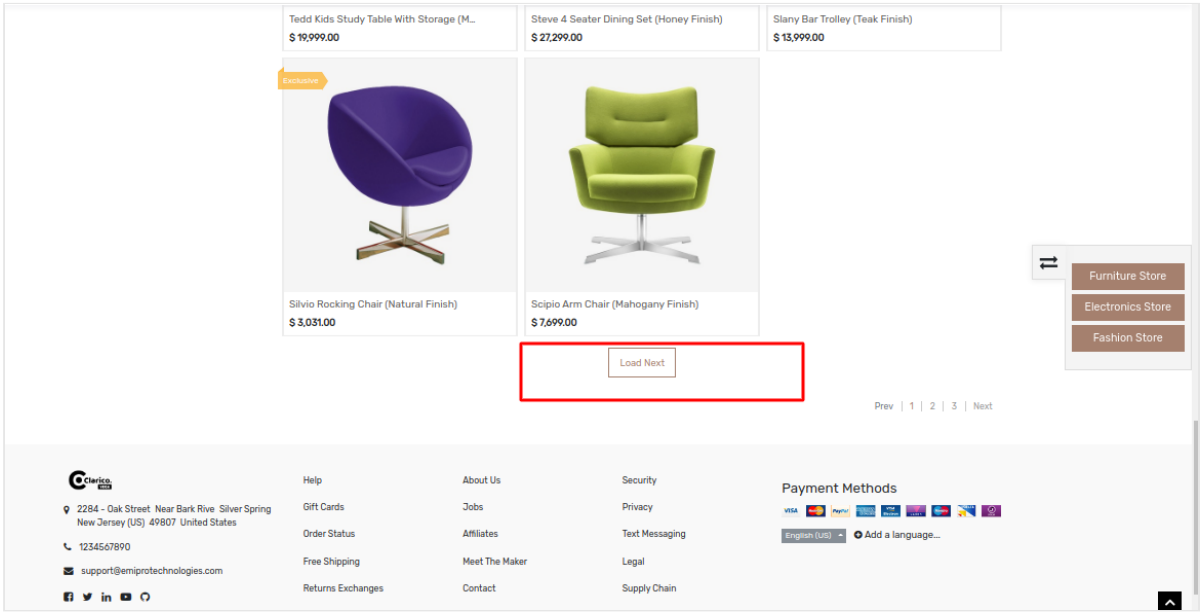


There are two types of product loading functionality

Automatic- on page scroll



Button- on click button



You can set the Load More image in the website and that image will be applied at the time of Load More functionality.

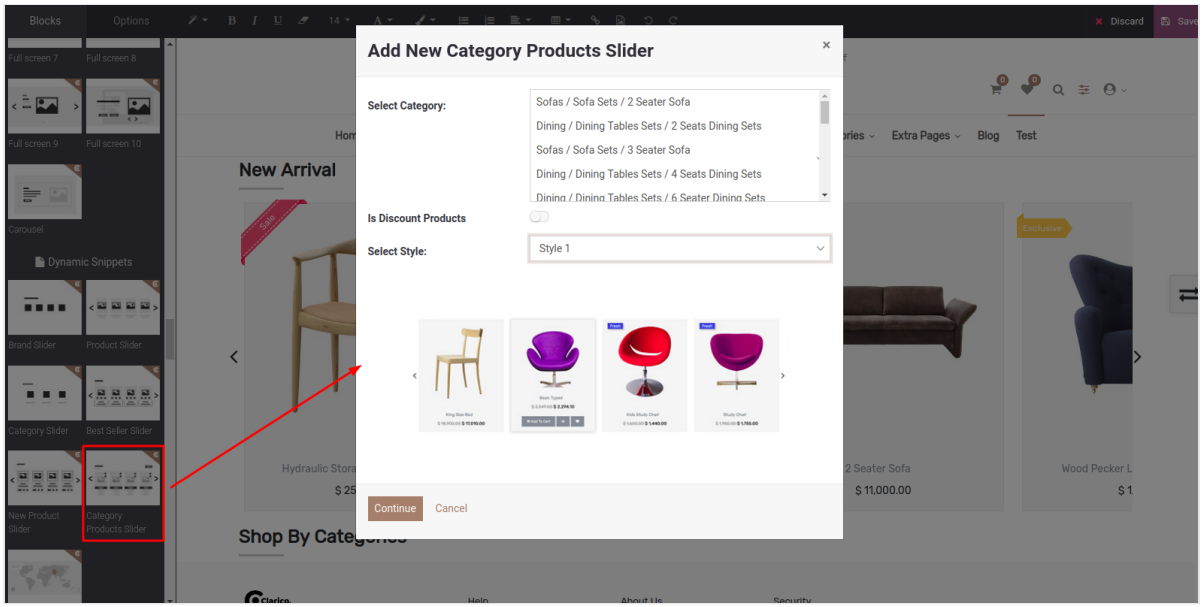
Note: We suggest you maintain the product column and count ratio in a normalized manner on the shop page. If the product column is 3 then product count should be in the multiplier of 3. For example [(3 x 5 = 15), (3 x 6 = 18), (3 x 8 = 24),(4 x 4 = 16), (4 x 6 = 24)]

Advanced Category Product Slider

Shop by Category slider is used to get the dynamic collection of the categories products that have been selected from the list of all categories.

Steps to configure Category product snippet:

- Step 1: Go to the web page and click on the edit button in the top right corner of the web page.
- Step 2: Drag and drop 'Category product Slider' snippet from Dynamic snippet category and it will show one popup to select the categories, Is Discount Products and select the style from the styles dropdown slider as per your requirement and click on continue button.



- Step 3: Save your changes and check on the web page. You can see the Category product slider on that particular page.

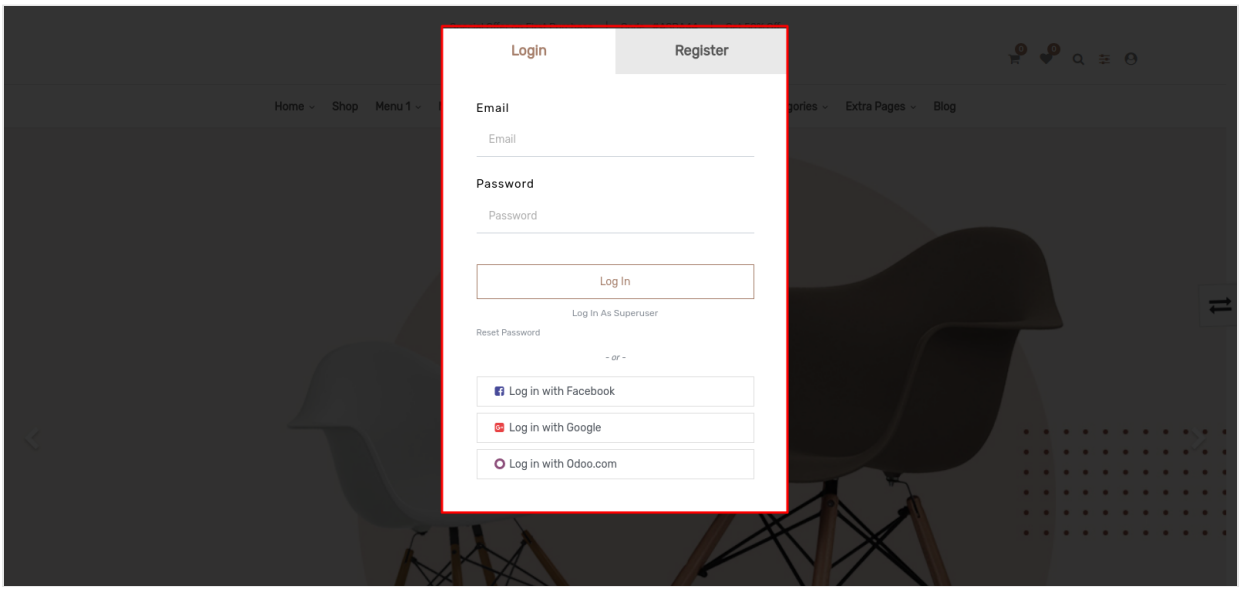
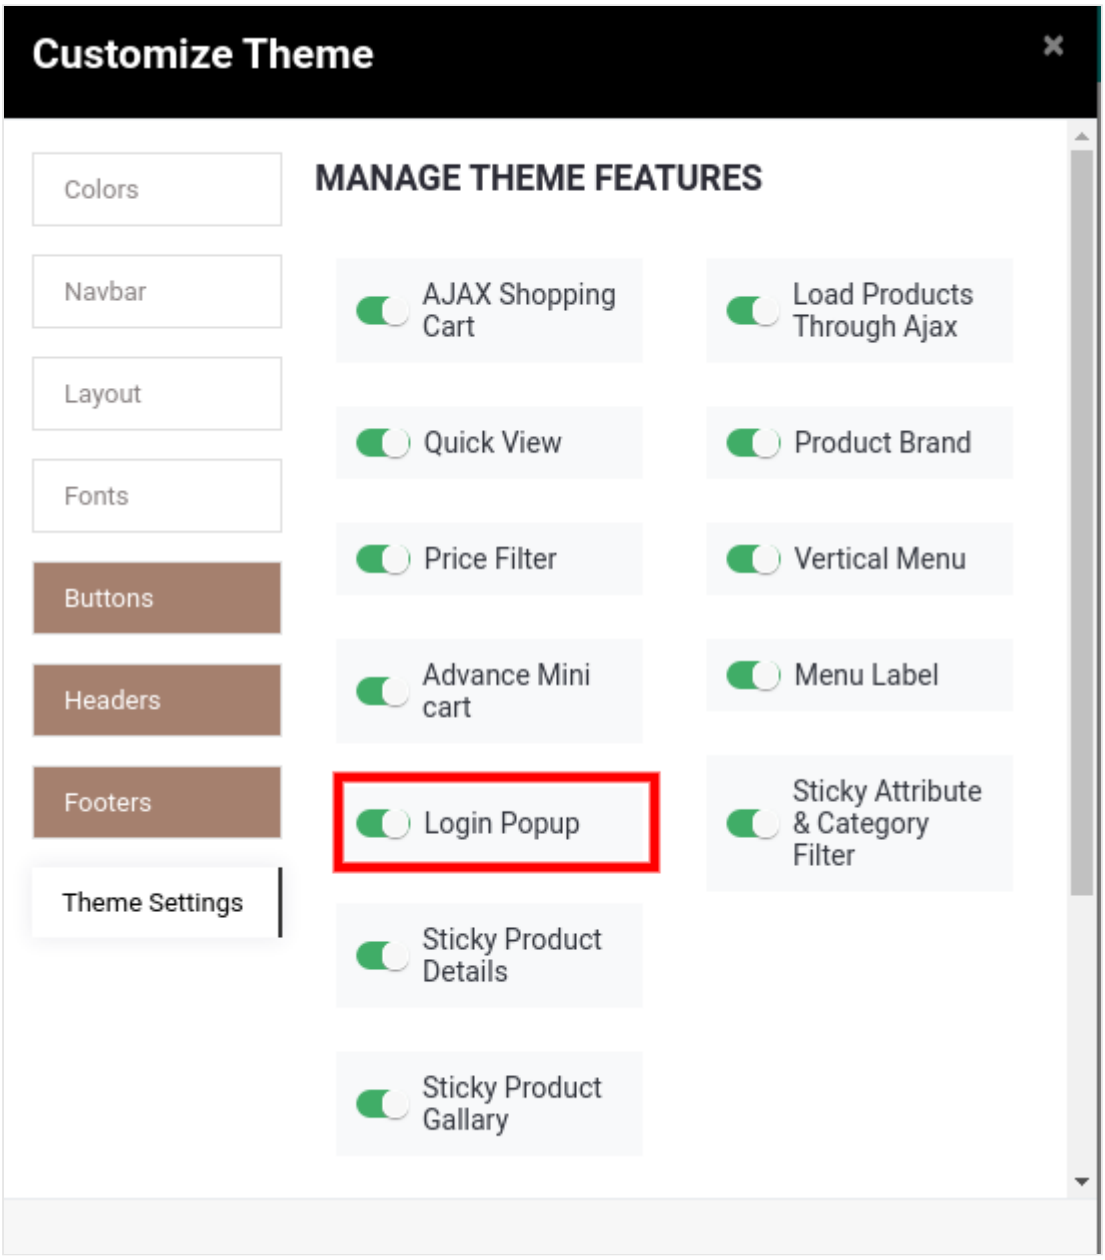
Log in & Sign up Popup

This feature allows the customer to login and register very quickly. They don't have to browse the Login / Register page. In a single pop-up, customers can enter the username & password, registration link, reset password and authentication provider. So, for particular actions, they don't have to navigate every page.



To enable/disable the Quick Login functionality, go to Web Pages -> Customize -> Customize Theme -> Login Popup.



Product Discount Slider

Product discount slider is a dynamic snippet which displays all the discounted products from the current pricelist. You can use this snippet in Brand landing page, Category landing page as per your need. With the help of other discount sliders, you can easily create Offer Zone/ Offer Page on your website.

Steps to configure Product Discount Slider:

- Step 1: Configure Pricelist items with product option as per the screenshot.

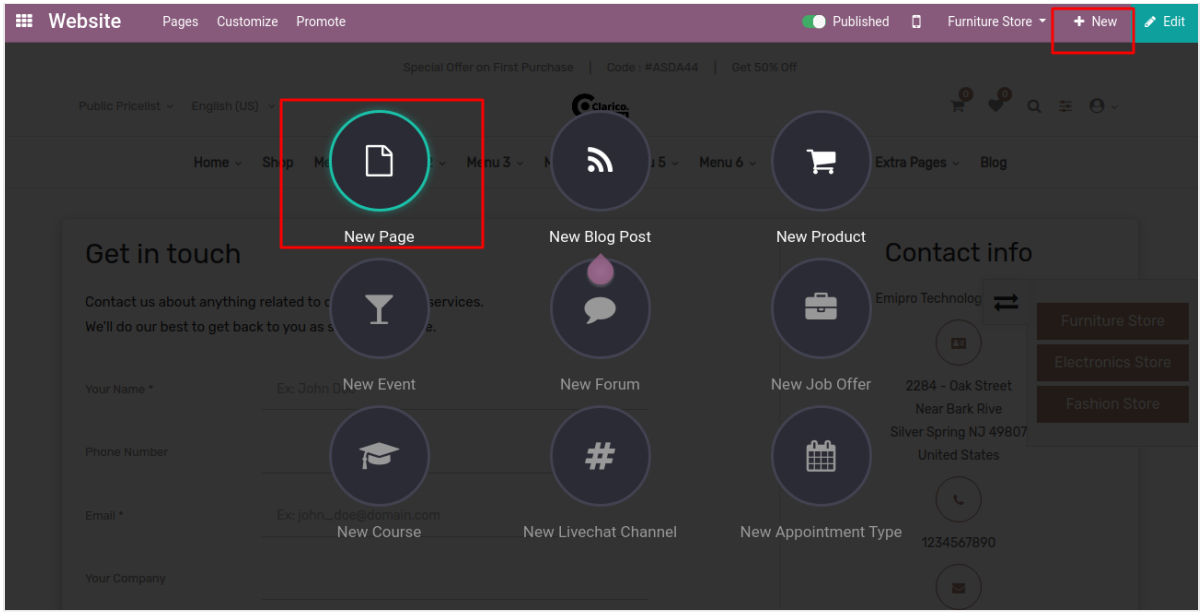
Brand Landing page

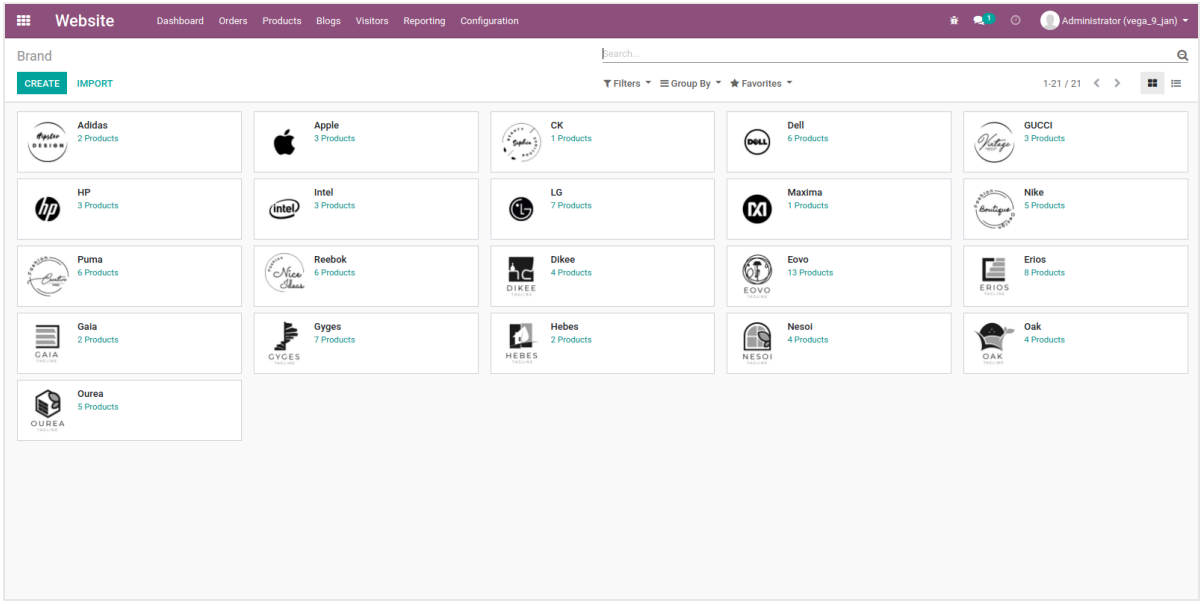
This feature allows you to display the landing page of specific Brand. You can easily create some catchy web pages using our snippets and can easily assign it to the Brand. When customers click on Brand from Brand Slider at that time it will redirect to that specific brand landing page. Where you can show-case your brand related CMS blocks, Offers, Product etc.

Step to configure Brand Landing Page

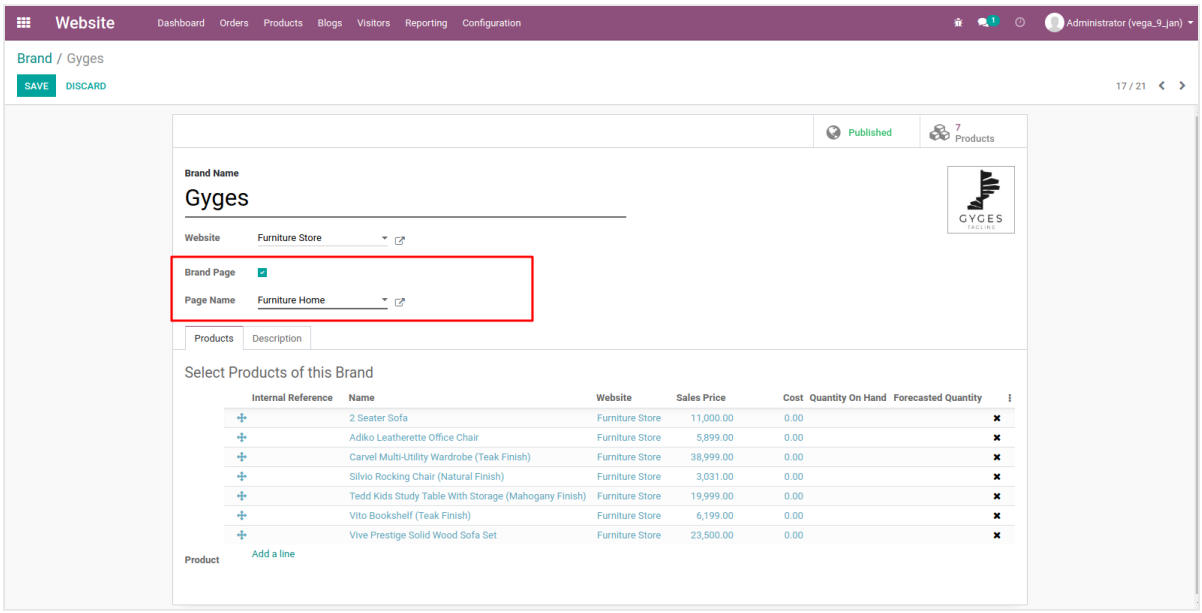
- Step 1: Go to the web page and click on the new button in the top right corner of the web page. Click on New page option and one pop will appear to enter the name of the page title and click on the continue button.
- Step 2: It will redirect to the particular page that you have created. Drag and drop the snippets you would like to have on that page and save it.



- Step 3: Go to Website -> Configuration -> Product Brands.
- Step 4: Select the brand in which you want to assign the brand page.



- Step 5: click on the edit button and enable Brand Page option. Add the brand landing page on Select Page option and save it.

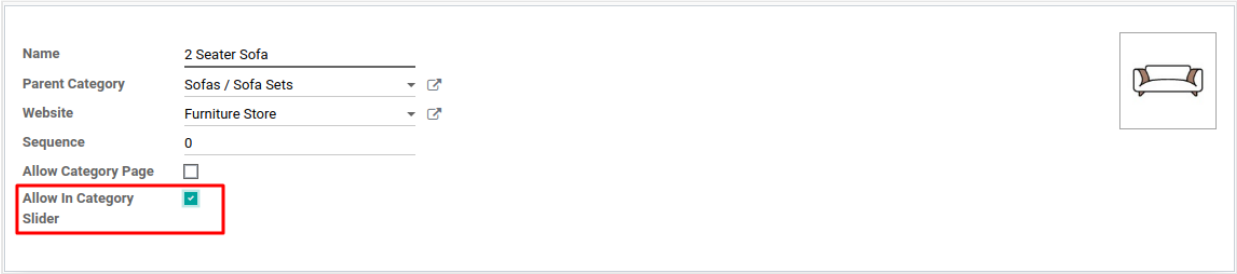


- Step 6: Go to the web page and from the brand slider, click on the particular brand, it will redirect to the brand landing page.

Category Slider

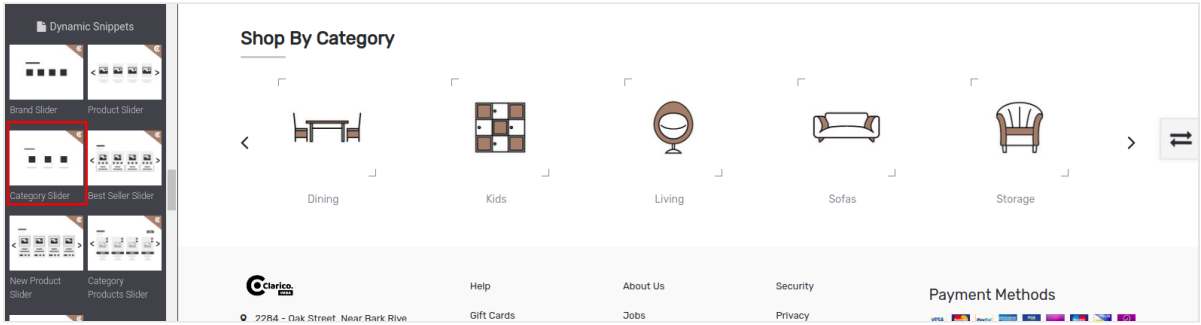
The category slider is a dynamic snippet. It will show the configured category in the slider and for configuring the category slider go to this path, Website -> Configurations -> eCommerce Category. Make sure to check the "Allow In Category Slider" checkbox to set this category in the slider snippet.0

After creating this record you need to add the category slider snippet on a web page.



Steps to configure Category Slider:

- Step 1: Go to the web page and click on the edit button in the top right corner of the web page.
- Step 2: Drag and drop ‘Category Slider’ snippet from Dynamic snippet portion.
- Step 3: Save your changes and check on the web page. You can see the Category Slider on that particular page.



Note: Make sure you have added the category image. Otherwise, It will not be displayed in the slider.

Category Landing page

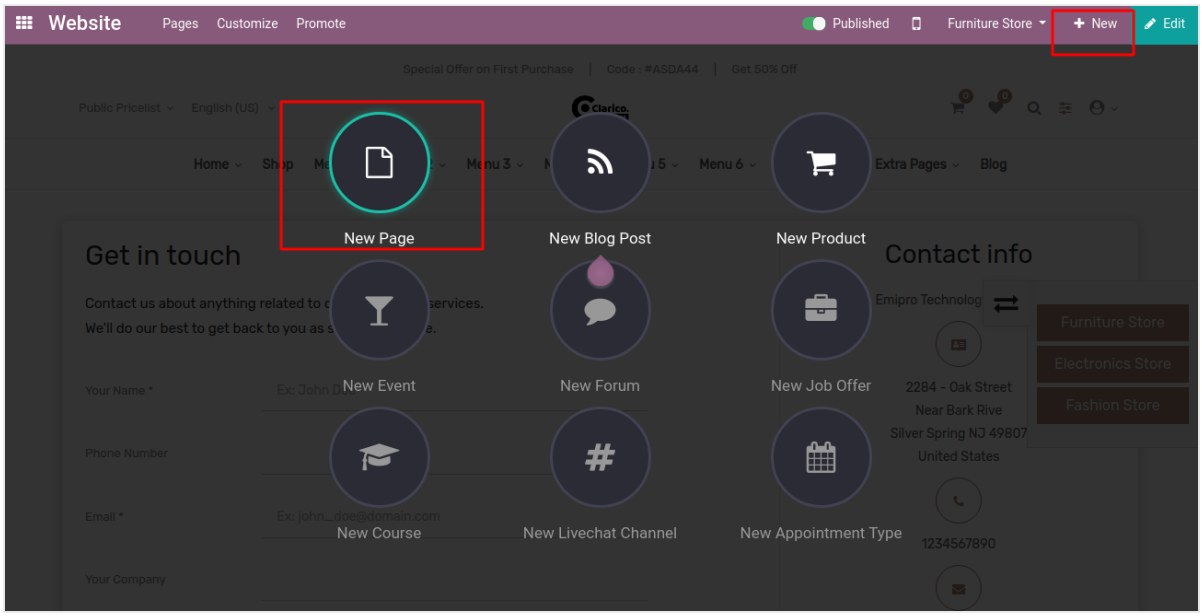
This feature allows you to display the landing page of a specific Category. You can easily create some catchy web pages using our snippets and can easily assign it to the category. When customers click on Category from Category Slider at that time it will redirect to that specific category landing page. Where you can show-case your category related CMS blocks, Offers, Product etc.

This feature allows you to view a particular category's landing page. With these snippets you can easily build up some catchy web pages and can easily allocate them to the Category.

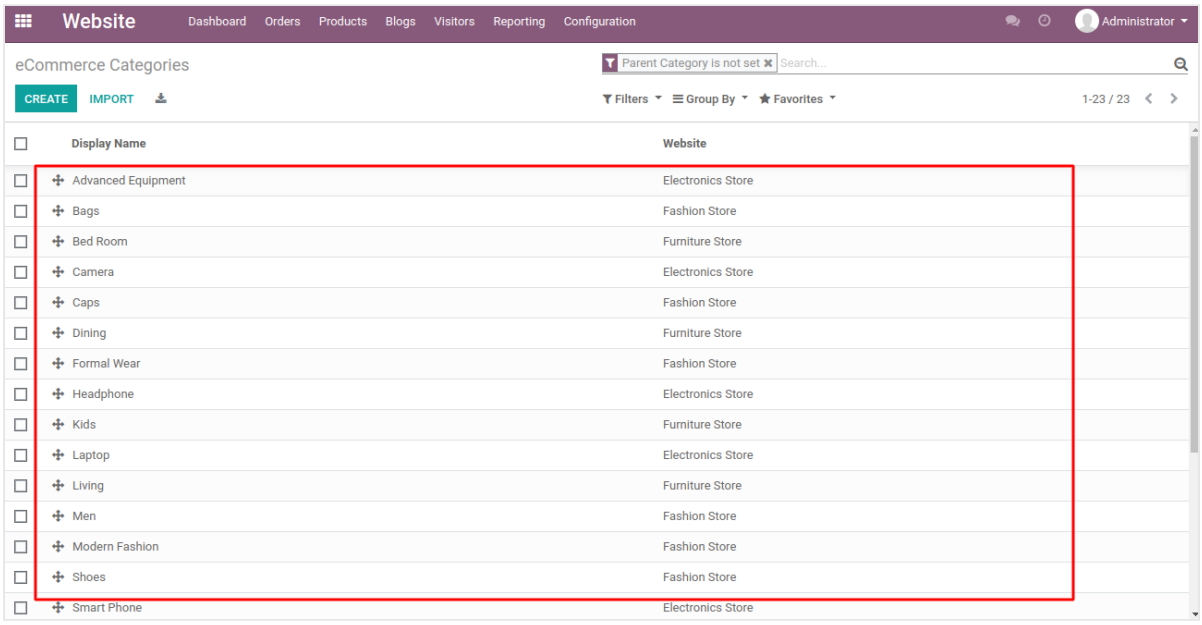
By clicking Brand from Category Slider, customers will redirect it to that particular category landing page at that time where you can show your brand related CMS blocks, Offers, Products, etc.

Steps to configure Category Landing Page:

- Step 1: Go to the web page and click on the new button in the top right corner of the web page. Click on New page option and one pop will appear to enter the name of the page title and click on the continue button.
- Step 2: It will redirect to the particular page that you have created. Drag and drop the snippets you would like to have on that page and save it.

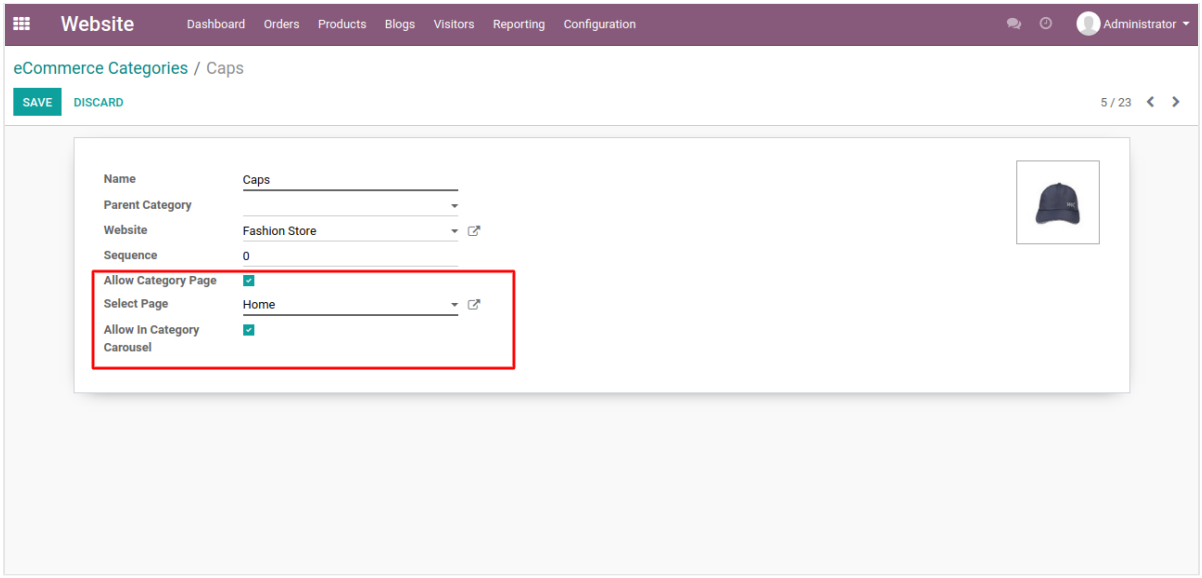


- Step 3: Go to Website -> Configuration -> Settings -> eCommerce categories.
- Step 4: Select the category in which you want to assign the category page.



- Step 5: click on the edit button and enable Allow Category Page option.

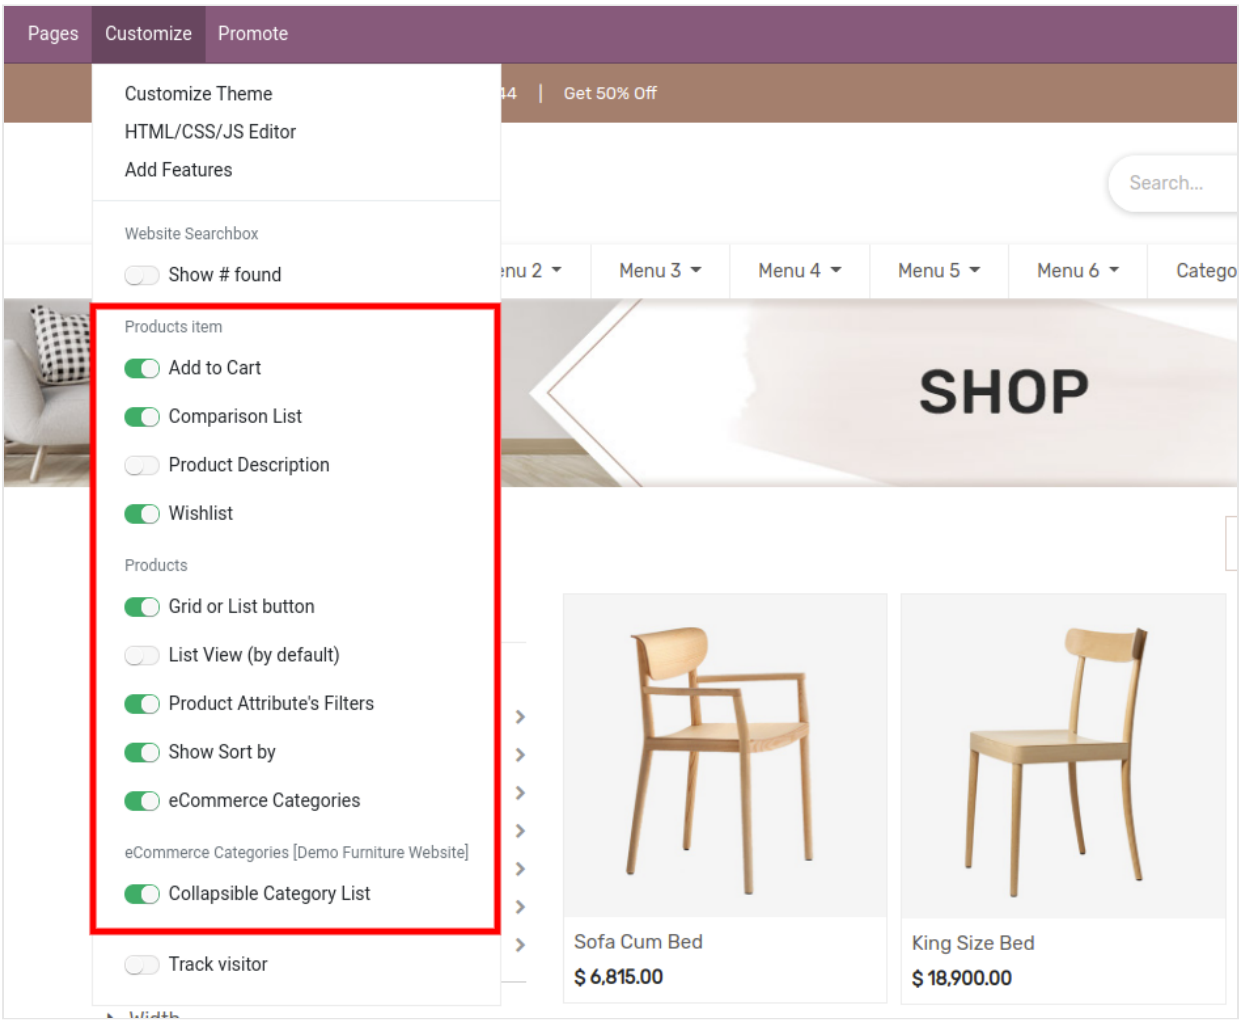
  Add the category landing page on Select Page option and save it.



- Step 6: Go to the web page and from the category slider, click on the particular category, it will redirect to the category landing page.

Shop Page Configuration

You can manage your shop related configuration from top of the Shop page from your website as per the below screenshot.



Note: It's advisable, if you don't want to use Comparison List and Wishlist then disable from the front side(as shown in the above screenshot) instead of Website configurations from backend.

Theme Customize

In the theme customize section, you can manage colors, layout, navbar, fonts and other theme related configurations. Go to a web page -> Customize -> Customize Theme.

You can also get Theme Clarico Vega related configurations in theme customize option. So you can set or change as per your requirement.

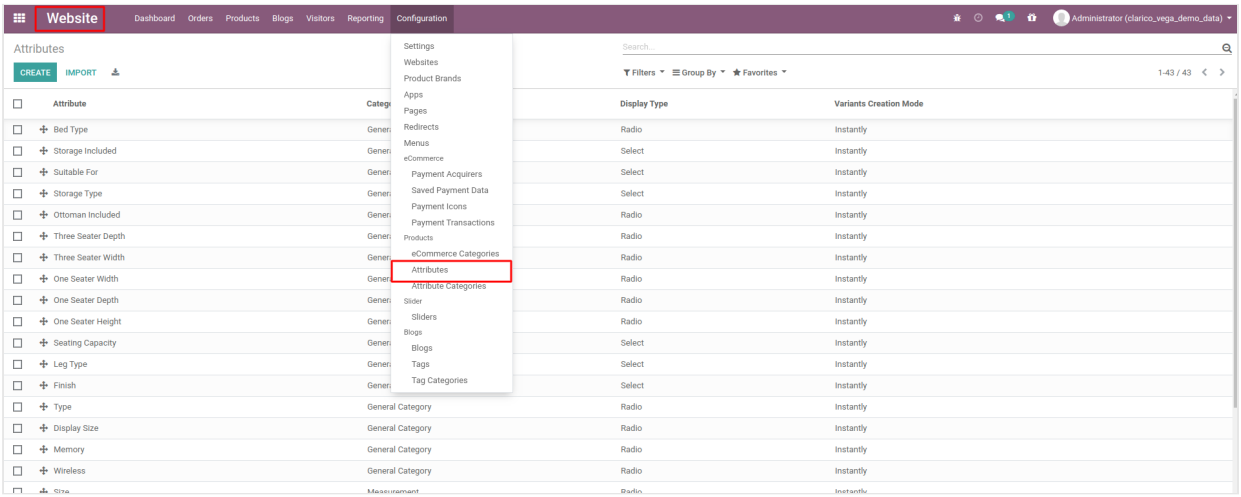
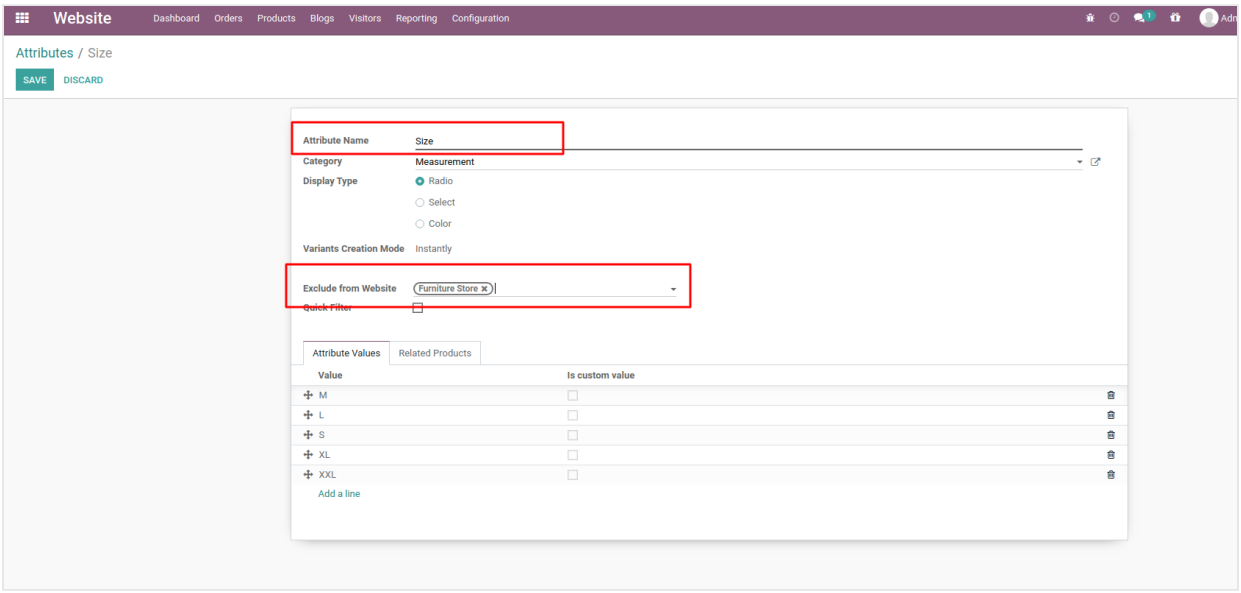
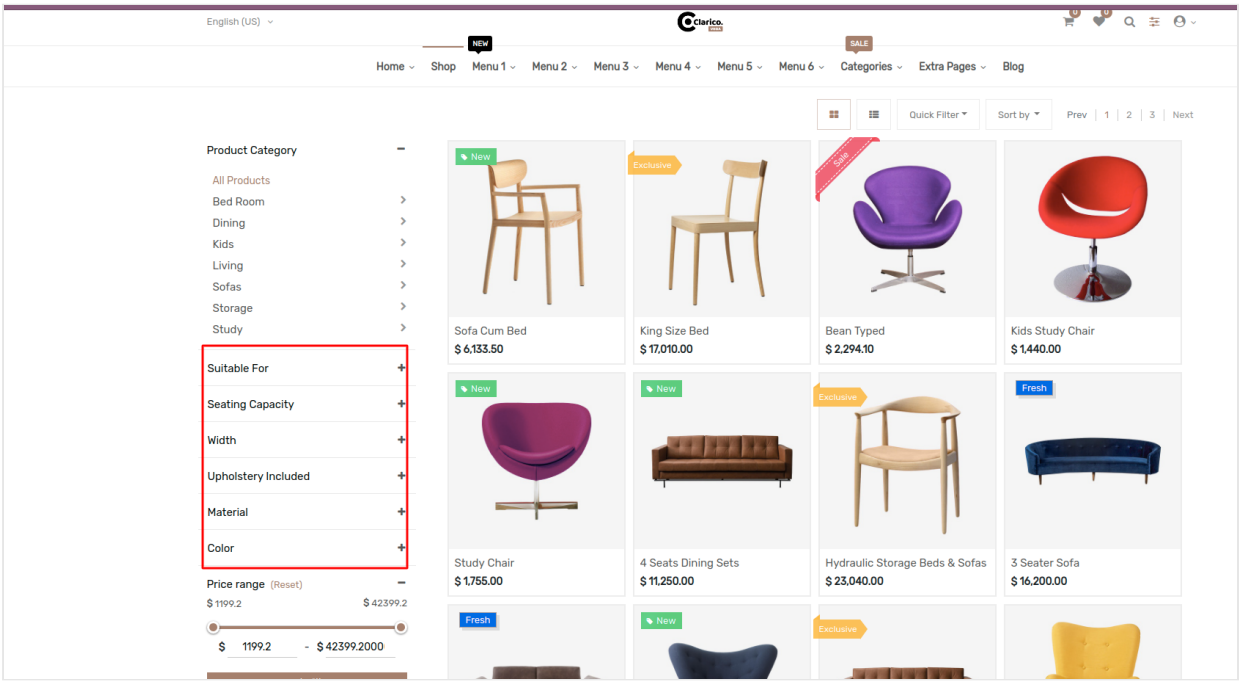
As per the above screenshot, you can enable/disable the count in Attribute Listing.

Exclude Unnecessary Attributes From Shop Filters

With the help of this feature, you can exclude any attribute from the Attribute Filters list. If you want to hide any specific attribute from a specific website, then you can easily exclude that filter.



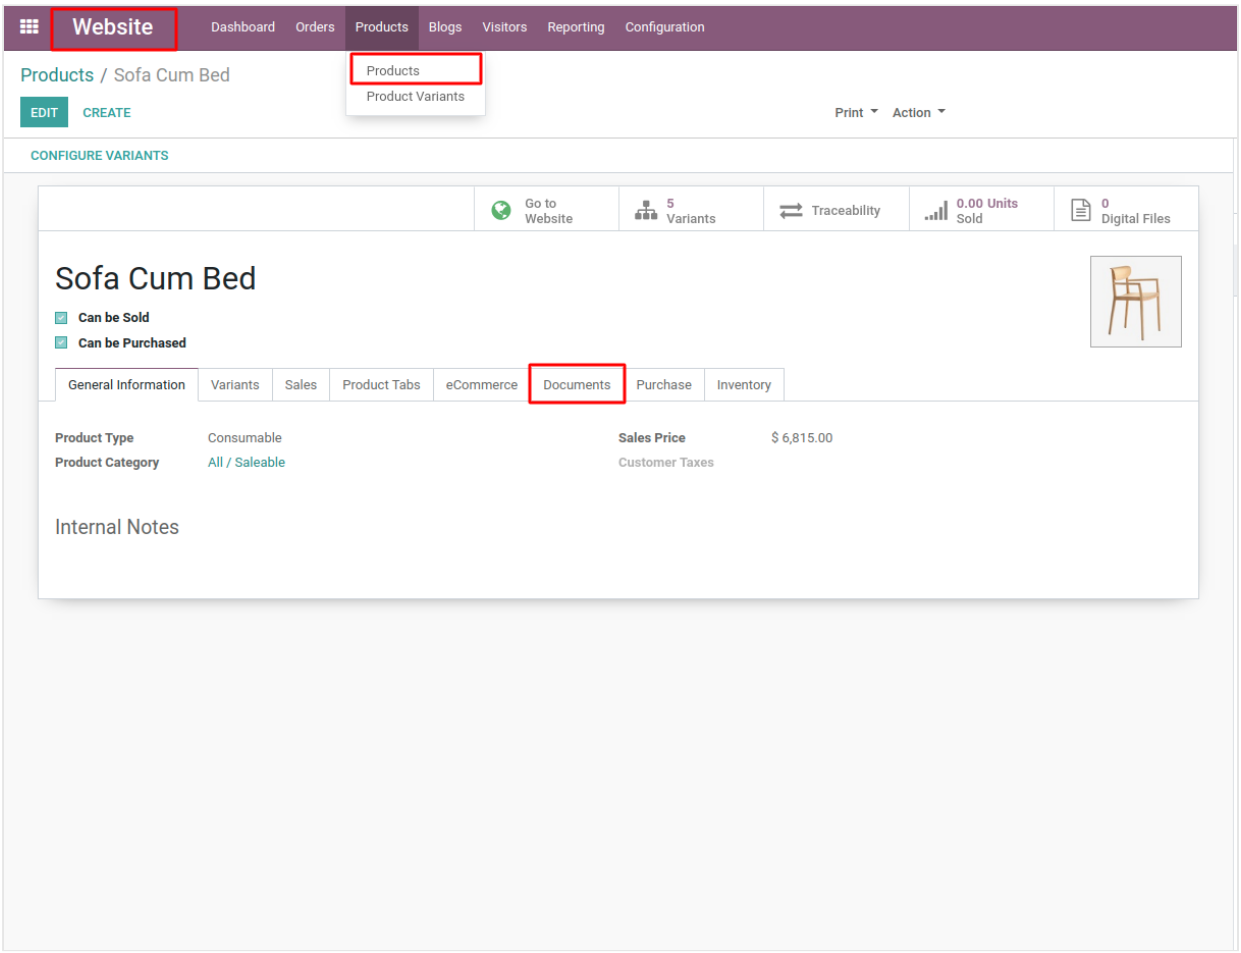


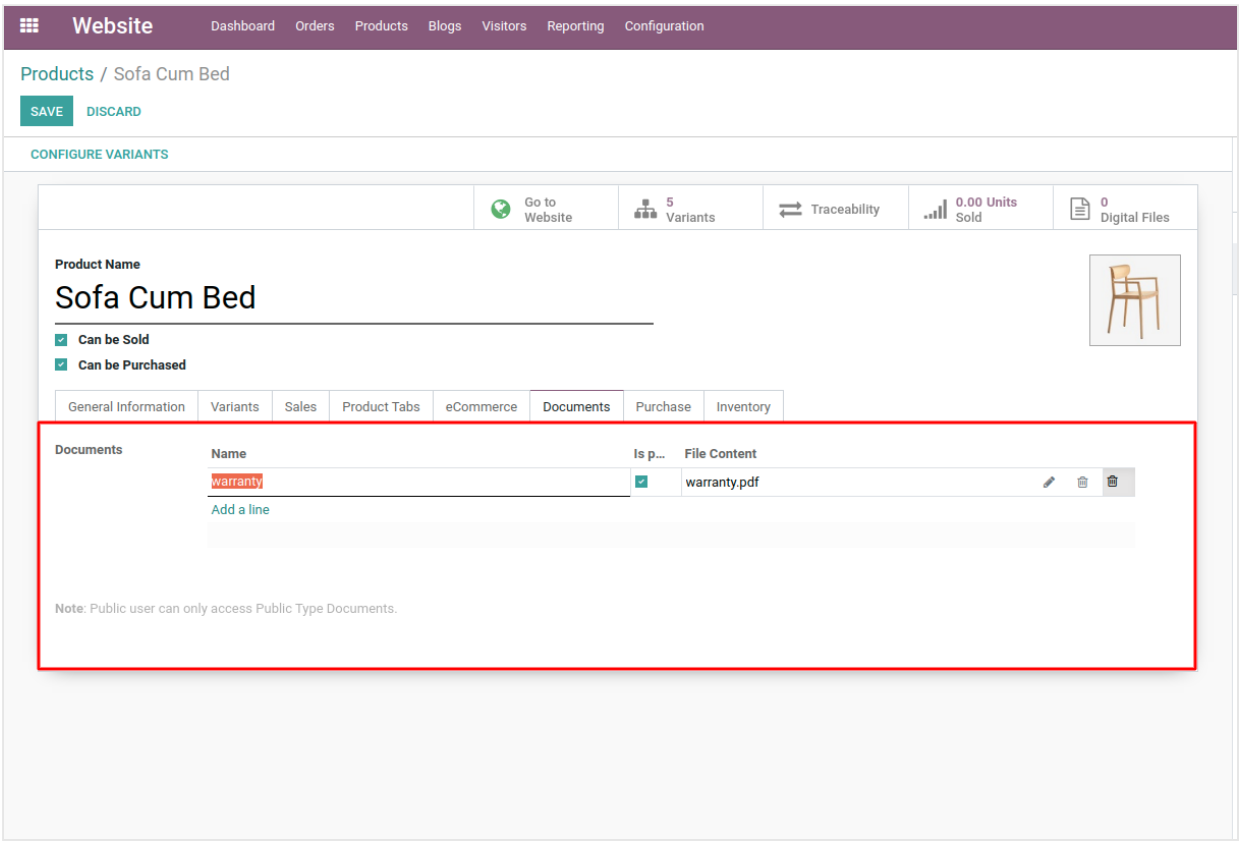


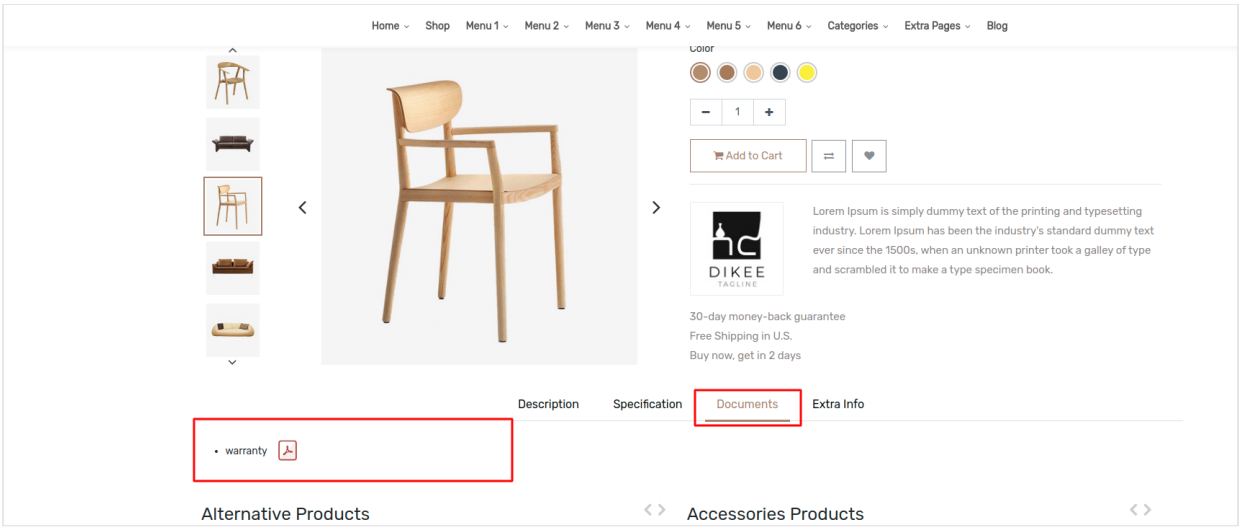
Documentation Tab On Product Page

This feature allows you to provide the functionality of downloading any documents from the Product page.

Step to upload documents in Product Backend Go to Website -> Products -> Products and open the product record.







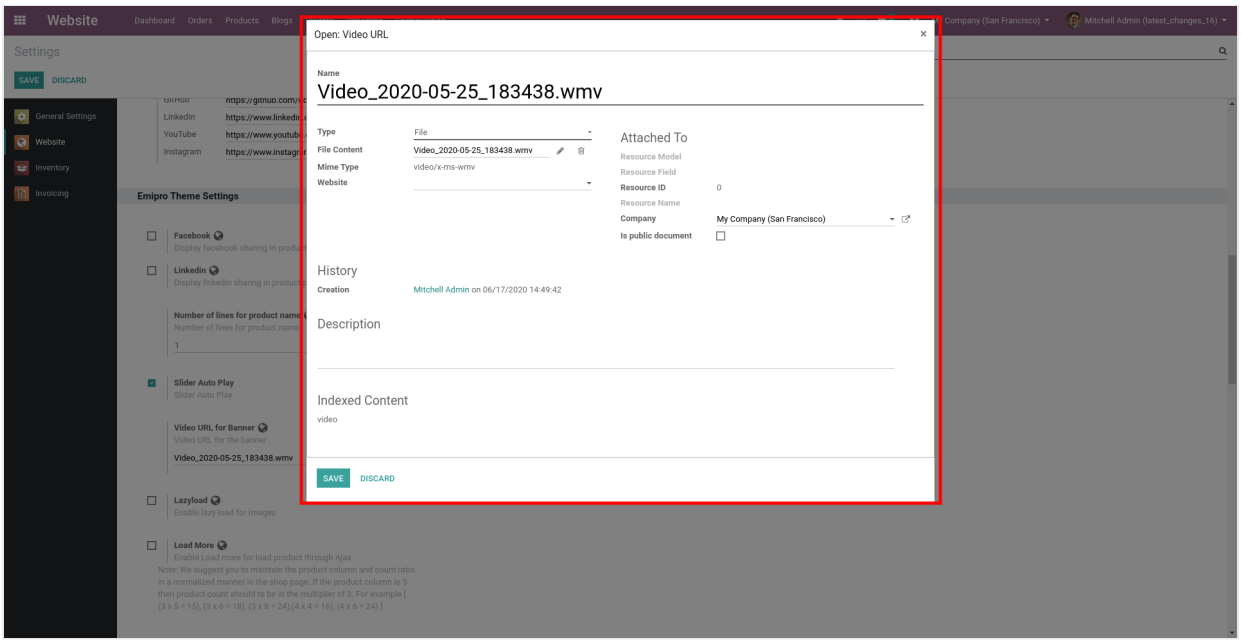
You can see one tab named Documents where you can upload the documents which you want to display in the product page.

Banner Video

We have provided a feature in our theme where you need to do basic configuration, and then you can easily add video to your website through the Banner Video Snippet. Note: Right now video banner is not supporting web-site wise configurations and it will support below formats.

Steps to configure the Banner Video snippet:

- In the admin side, go to Website -> Configurations -> Settings and go to Emipro Theme Settings tab.
- Under 'Video URL for Banner' section you just need either Create record Or Edit the record.



In Video configuration popup we only need to specify the name of the video and then need to specify the Type:

- File : You can upload the video from your server/machine.
- Url : Need to specify the url which contains video.

- Click on the Save button and go to web-site front-end.
- Click on the Edit button and then drag and drop Banner Video Snippet and click on the save.

Right now, the video banner does not support web-site wise configurations and will support formats below.

- mov
- mkv
- mp4
- webm

Show Associated Attribute Value

This feature allows you to shows only associated attribute values in Attribute Listing as well as Quick Filter listing.

For enable- disable this feature go to Web Pages -> Customize -> Customize Theme -> Theme Settings.
